Summary of Report

Section 1200 of the Real Property Tax Law requires that the Department of Taxation and Finance monitor the equity of assessments in New York in the context of its periodic market value surveys, and report its findings to the Governor, the President Pro-Tem of the Senate, and the Speaker of the Assembly. The current report presents such an analysis, based on results from the 2014 survey.

Findings

Approximately 74 percent of the State's assessing units are indicated as having equitable assessment rolls. The number achieving overall equity had been rising steadily until the middle of the past decade (see Figure 1 in the report) and stands in dramatic contrast to the situation of three decades ago when only about 10 percent had equitable assessments. However, in the last half of the past decade, equity levels have retreated somewhat. It is believed that this reflects the influences of turbulent real estate markets in many areas, and the difficulty some assessors are having in ensuring that their rolls reflect current market conditions. In the last few years, a modest upward trend in equity has reappeared, however.

A related positive trend has been the number of assessing units that have been updating their rolls on a frequent basis. As indicated in Figure 3, 306 units (31 percent) have submitted cyclical reassessment plans committing to a regular cycle of reappraisal. Although this is not a compulsory state requirement in New York, the State's reassessment aid program has been recently modified to encourage the use of a four-year updating cycle.

Despite the major progress that has occurred over the past few decades, much remains to be done. A significant number of assessing units, including many in rural regions of the State and some in its most populous areas such as the Lower Hudson Valley and Long Island, have not reassessed in many decades. Some small assessing units in rural areas of the State have difficulty finding the resources to perform the assessing function

to today's standards, and need to explore consolidation and/or coordination of effort in order to carry out their assessment duties equitably and efficiently.

In recent years, a "plateau" seems to have been reached in terms of local participation in existing state aid incentive programs for quality assessing. Thus, new methods of encouraging more communities to reassess have been sought, including the recent redesign of the reassessment aid program. This report also outlines a series of policy measures that are used in other states for the purpose of ensuring that local governments maintain current, equitable assessments, and recommends that they be considered in New York.

Methodology

The survey found that 554 assessing units (approximately 56 percent) implemented recent reassessment programs that could be used directly in determining 2014 municipal full value. For these assessing units, the survey process consisted of a review by Department staff of the reassessment roll and the procedures and data used to conduct the reassessment program. In cases where the assessed values appearing on the roll represented a recent year other than 2014, they were adjusted to the statewide value standard of July 1, 2013 that was used in the survey. This review and trending process for assessing units with recent reassessments was first implemented for the 1996 market value survey and, for a substantial portion of the State, it has eliminated the costly sampling of rolls and appraisal of parcels that had been undertaken in prior surveys.

For the remaining approximately 44 percent of assessing units that did not have recent reassessments, samples of sales and appraisals, and computer-assisted mass appraisal (CAMA) models, were used to determine the local level of assessment. Where reliable residential sales data reflecting the appropriate time frame were available, such sales were used to replace or augment individual parcel appraisals. CAMA techniques were employed where insufficient residential sales were available but local property inventories were satisfactory for modeling purposes. For the non-residential property classes -- generally characterized by greater heterogeneity and complexity -- individual sampled parcels were appraised if the class represented a significant component of the total value on the roll.

Uniformity of assessments on the sampled rolls was measured primarily through a statistic known as the Coefficient of

Dispersion (COD). This statistic measures the extent of assessment “error” observed among the assessment ratios (assessed value divided by market value) of the sample parcels. Ideally, all ratios within an assessing unit (or, for New York City and Nassau County, within a property class) should be the same, indicating perfectly uniform assessments. However, unavoidable imperfections in valuation and estimation error require that some minimum level of variation be deemed acceptable. The amount of variation that is acceptable is a function of the type of property and the amount of market activity in a given community, with the most rural areas generally capable of attaining assessments that are less uniform than those attainable in urbanized areas, due to greater variability among properties and sparse market data for some or all property types.

Among the sampled assessing units, approximately 39 percent had COD estimates for the entire assessment roll that satisfied State guidelines, which in turn are based on standards established by the International Association of Assessing Officers (IAAO). In terms of residential property, where allowable COD levels are more stringent, 23 percent met the guidelines.

Introduction

Distributional equity in real property taxation requires that properties of the same value be treated alike in terms of their assessments. New York State law (Section 305 of the Real Property Tax Law) stipulates that assessing jurisdictions must assess properties at a uniform percentage of value, and State courts have held that “value” means “market value.” New York’s two “special assessing units,” New York City and Nassau County, must assess at a uniform percentage of market value within each of four specified property classes. This means that all parcels on the assessment roll (or, for special assessing units, within each class) should have the same, or at least very similar, assessment ratios (assessed value divided by market value). Each assessing unit has the right to choose the percentage of value to be used as an assessment standard.

The New York State Department of Taxation and Finance has statutory responsibility for regularly monitoring the equity of assessments. An analysis of assessment uniformity is carried out each time the Department’s staff completes a market value survey.¹ The present report documents findings from the 2014 market value survey.

Included herein is information for the State’s 983 non-village assessing units, which consist of 2 counties, 61 cities and 920 towns.

¹This analysis is required by Section 1200 of the Real Property Tax Law.

For the 2014 market value survey, the level of assessment uniformity for each assessing unit was estimated using one of four possible approaches, as outlined below:

1. Sales Ratio Study – This approach involves a systematic comparison of assessed values to sales prices for properties that have sold. It is used if there is a sufficient sample of sales to provide a reliable estimate of the ratio of assessed value to sales price. The sales prices may be time-adjusted to a common valuation date in order to establish value and assessment ratio as of that date. It is used for residential property only, and supplemented by appraisals for other property types.
2. Computer Assisted Mass Appraisal Ratio Study (CAMA) – CAMA involves a systematic comparison of assessed values to market values generated by a computer model. The model uses a multiple regression equation to predict the market value of residential parcels based on sales data and the physical inventory characteristics of the parcels. The CAMA approach is particularly useful in municipalities with few sales but good inventory data. It is used for residential property only, and is supplemented by appraisals for other property types.
3. Statistical Sample of Parcels, Using Appraisals and/or Sales – A stratified sample was used where suitable data were available and the sales ratio and/or CAMA approaches were determined to be inappropriate. Direct use of time-adjusted sales in ratio determination was limited to residential property.
4. Review and Verification of a Recent Reassessment -- The review and verification process was used in assessing units having conducted recent reassessments. It involves an analysis of the reassessment process and results to verify that assessments adequately reflect current market conditions. As part of the review, an extensive audit document is completed (see example in Appendix A) in which the data and analytical processes used to determine the assessments are examined in relation to acceptable professional standards of practice.

Approaches 1 through 3 result in independent computations of the local level of assessment and the assessing units in question are referred to in this report as the “sampled assessing units.” Classes of property comprising a very minor portion of the value on the assessment roll may not have been independently valued. The full value of these classes was estimated by applying the overall ratio of the sampled classes. In some cases, appraisals from a prior, recent market value survey may have been reused in the 2014 market value survey.

As mentioned above, assessing units having completed recent reassessments were not sampled, primarily to focus available resources on those with older assessment rolls. These units were handled through the fourth approach, “Review and Verification of a Recent Reassessment,” and are referred to as “non-sampled assessing units.” A recent reassessment means that the assessing unit has an equitable assessment roll, unless significant errors have been made in the reassessment process, in which case the roll would not have been accepted for review and verification in the survey. Therefore, in the statistical tabulations presented in this report concerning assessment equity, assessing units wherein the review of reassessment procedure was used and the reassessment was deemed acceptable have been counted as meeting equity standards.

It should be understood, however, that the designation of assessing units as having adequate equity does not necessarily imply that all properties in them are accurately assessed. Factors such as uniqueness of certain properties, rapidly changing neighborhood conditions and/or dynamic market segments in certain time periods, and other such factors, will necessarily mean that there will be inevitable imperfections on the roll, as assessment is not an exact science.

Measuring Assessment Uniformity

The primary means of measuring assessment uniformity is a statistic known as the Coefficient of Dispersion (COD). The COD measures the extent to which the assessment ratios from a given roll exhibit dispersion around a midpoint. It is generally accepted that the median assessment ratio best serves as the midpoint or central tendency measure from which the average level of dispersion should be calculated.

Assessing units with good assessing practices have low CODs, showing little deviation of individual assessment ratios from the median ratio. For example, if the median ratio for the parcels

sampled in a given assessing unit is 50 percent, a house with a market value of \$100,000 should be assessed at \$50,000, a commercial property valued at \$400,000 should be assessed at \$200,000, and a \$2,000,000 industrial parcel should be assessed at \$1,000,000. If all other sampled parcels were similarly assessed at 50 percent of market value, the median ratio would also be 50 percent and the average deviation, as measured by the COD, would be zero. Conversely, an assessing unit with little assessment uniformity would have widely varying assessment ratios among the sampled parcels, resulting in high dispersion around the median ratio and, therefore, a high COD. Widely varying ratios result in unequal tax bills for properties of equal value.

Examples 1 and 2 show two hypothetical assessing units, each attempting to assess properties at 80 percent of market value. In Example 1, the assessed values range from 52 percent to 120 percent of market value, indicating a relatively high level of dispersion and poor assessment practices. Assessments such as these would result in an inequitable distribution of local taxes between property owners.

Example 1. Coefficient of Dispersion of 30 Percent: Low Uniformity

Parcel #	Assessed Value	Market Value	AV/MV Ratio	Absolute Deviation from Median
1.	\$120,000	\$100,000	1.20	.40
2.	110,000	100,000	1.10	.30
Median 3.	80,000	100,000	.80	.00
4.	58,000	100,000	.58	.22
5.	52,000	100,000	.52	.28
Total Deviation				1.20
$\frac{\text{Total Deviation}}{\text{No. Parcels}} = \frac{1.20}{5} = .24 \text{ average deviation from median}$				
$\text{COD} = \frac{\text{Avg. Deviation}}{\text{Median Ratio}} = \frac{.24}{.80} = 30 \text{ percent}$				

Example 2 shows a hypothetical case where assessments are more uniform. The assessment ratios range from 64 percent to 92 percent, and are closer to the target ratio of 80 percent, showing substantially less dispersion than is evident in Example 1. While some dispersion is indeed present, it is significantly lower than in the previous example and within an acceptable range when factors such as measurement error and valuation uncertainty are taken into account.

Example 2. Coefficient of Dispersion of 10 Percent: Acceptable Uniformity

Parcel #	Assessed Value	Market Value	AV/MV Ratio	Absolute Deviation from Median
1.	\$92,000	\$100,000	.92	.12
2.	88,000	100,000	.88	.08
Median 3.	80,000	100,000	.80	.00
4.	76,000	100,000	.76	.04
5.	64,000	100,000	.64	.16
Total Deviation				.40
$\frac{\text{Total Deviation}}{\text{No. Parcels}} = \frac{.40}{5} = .08 \text{ average deviation from median}$				
$\text{COD} = \frac{\text{Avg. Deviation}}{\text{Median Ratio}} = \frac{.08}{.80} = 10 \text{ percent}$				

A second statistical measure of assessment uniformity, called the Price-Related Differential (PRD)² is also used in the current report for assessing units with no recent reassessment activity. The PRD is used to determine if there is a bias on an assessment roll toward systematic over-assessment of either high- or low-value properties in comparison to the average property. In computing the PRD, the simple mean of the assessment ratios is divided by the value-weighted mean ratio. If no bias exists, the two ratios should be close to each other, and the PRD should be near 1.00. This is referred to as “neutral” assessment practice, i.e., no price-related bias.

²This statistic is sometimes referred to as the Index of Regressivity.

However, if the simple mean ratio is considerably lower than the value-weighted mean, a low PRD results (less than 1.00). In this case, there is said to be a bias toward “progressivity,” that is, higher-value properties are being over-assessed and lower-value properties are being under-assessed. In the opposite situation, where the PRD is high (greater than 1.00), “regressive” assessing is evident. In other words, lower-value properties are being relatively over-assessed and higher-value properties are being relatively under-assessed. The International Association of Assessing Officers (IAAO) has established a range for the PRD which denotes uniform practices, i.e., neutral assessing: the PRD must fall in the range 0.98 to 1.03 to be considered acceptable.

Coefficient of Dispersion Standards

Upon the completion of a market value survey, two coefficients of dispersion are calculated for the assessing units with no recent reassessment activity, one for residential property alone and one for all property classes combined. To evaluate the CODs calculated in this process, they must be compared to accepted guidelines for assessment uniformity. The International Association of Assessing Officers, in its publication entitled Standard on Ratio Studies (January 2010), has recognized that the ability of an assessing unit to attain uniformity is affected by several factors, such as the types of property it contains, community size, population density, the degree of diversity of properties, market activity levels, and the relative ages of structures. The IAAO recommends a range of acceptable COD values, based on these categories and neighborhood characteristics, as well as the increased difficulty experienced in assessing classes of property other than residential. IAAO standards are summarized in Table 1.

Table 1. Ratio Study Uniformity Standards Indicating Acceptable General Quality, IAAO*

Type of property - General	Type of property - Specific	COD Range**
Single-family residential (including residential	Newer or more homogenous areas	5.0 to 10.0
Single-family residential	Older or more heterogeneous areas	5.0 to 15.0
Other residential	Rural, seasonal, recreational, manufactured housing, 2-4 unit	5.0 to 20.0
Income-producing properties	Larger areas represented by large	5.0 to 15.0
Income-producing properties	Smaller areas represented by	5.0 to 20.0
Vacant land		5.0 to 25.0
Other real and personal property		Varies with local conditions
*These types of property are provided for general guidance only and may not represent jurisdictional requirements.		
** CODs lower than 5.0 may indicate sales chasing or non-representative samples.		

In its work with various types of assessing units, the Department’s staff has also found that the more rural areas, where there are relatively few sales and properties are more heterogeneous, pose greater difficulty in establishing accurate assessments and market values. Thus, in measuring assessment uniformity, staff has taken the view that somewhat higher COD levels would be acceptable in areas with rural characteristics as contrasted with urban and suburban areas. The guidelines established are summarized in Table 2 and were applied in determining the number of assessing units achieving equity for purposes of this report.

Table 2. Department Guidelines for Assessment Uniformity

Population Density (persons/sq. mile)	Coefficient of Dispersion, All Property
100 or less	≤ 20
101 to 400	≤ 17
401 or more	≤ 15

Coefficient of Dispersion Results

For the 2014 market survey, the median residential COD among the sampled assessing units was 17.62, and the median for all property classes combined was 20.12.³ In other words, half the sampled assessing units achieved greater uniformity than indicated by these median values, and half achieved less. The range in the all-property COD was 3.75 to 67.00. For the residential COD, the range among assessing units was 3.47 to 51.24.

The COD results presented herein are point estimates. If the estimation were replicated using an alternative data set, it is likely that somewhat different figures would be obtained due to sampling error. Gloudemans, an expert in the field, has proposed a confidence interval approach to recognize the problem of sampling error. His approach results in a range within which the COD estimate will fall with a known probability. However, the approach does not obviate the need for making point estimates of the COD.⁴

³The special assessing units of New York City and Nassau County are excluded in calculating the median COD because they use a classified assessing system.

⁴See Robert J. Gloudemans, “Confidence Intervals for the Coefficient of Dispersion: Limitations and Solutions,” *Assessment Journal*, Nov./Dec. 2001.

Table 3 summarizes the 2014 COD information according to type of assessing unit, as measured by population density, and the COD guidelines shown in Table 2. A total of 39 percent of the sampled assessing units had 2014 CODs that reflected uniform assessing practices for the entire roll. In the case of residential property only, 23 percent of the sampled units had uniform rolls.

Table 3. Summary of COD Values for Sampled Assessing Units, by Degree of Urbanization (2014 Market Value Survey)

Population Density (Per Sq. Mi.)	No. of Assessing Units	Uniform COD Guideline		Percent of Assessing Units Achieving Uniform Level	
		Residential	All Property	Residential	All Property
≤ 100	232	15	20	26%	34%
>100 – ≤400	101	12	17	23%	40%
> 400	96	10	15	17%	52%
TOTAL	429	--	--	23%	39%

Note: Data for the individual municipalities within a Coordinated Assessment Program (CAP) are reported.

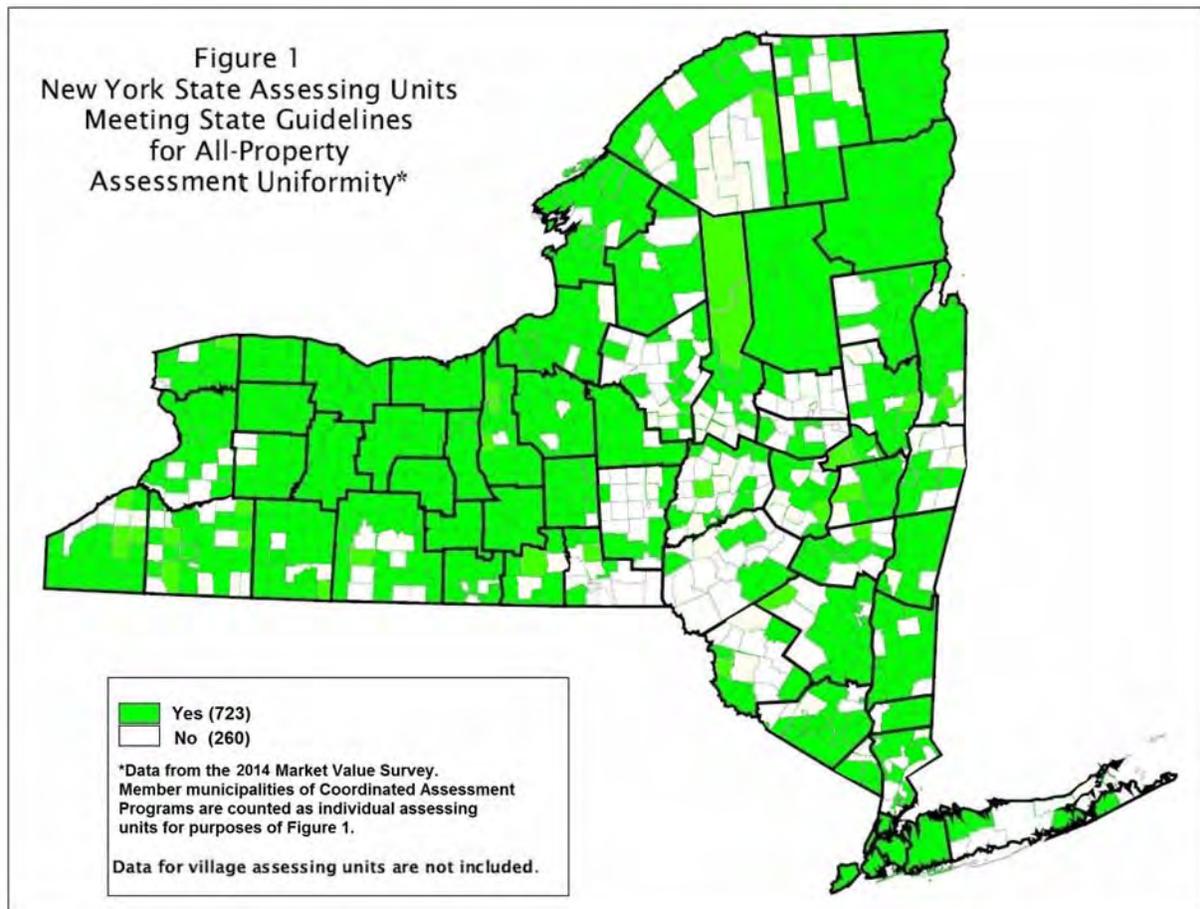

Table 4 shows the combined results for sampled and non-sampled assessing units. When the non-sampled units -- those for which a recent reassessment program was reviewed and verified -- are combined with sampled units achieving satisfactory uniformity, a total of 723 (73.6%) of the State's assessing units had uniform assessment rolls. This represents a decrease of three assessing units over the number found to be equitable in the 2013 survey analysis.

Table 4. Assessment Uniformity, Sampled and Non-Sampled Assessing Units* (2014 Market Value Survey)

	Total	Number with Uniformity	
		Residential	All Property
Sampled	429	99	169
Non-Sampled	551	554	554
Total	983	653 (66.4%)	723 (73.6%)

*Data for the individual municipalities within a Coordinated Assessment Program (CAP) are reported.

The geographic distribution of equitable assessing is shown in Figure 1. It can be observed that, in many parts of New York, all or nearly all the municipalities in a county have uniform rolls. On the other hand, clusters of rural assessing units with inequitable rolls are to be found in several areas, including the Northern Catskills, Southern Tier, Adirondacks and Southwestern New York. Some of the densely populated units in the Lower Hudson Valley and Long Island areas also have not achieved equitable rolls.

Another view of the equity of assessment rolls can be obtained from analysis of the level of assessment reflected on the roll, as contrasted with the degree of uniformity. Table 5 shows the distribution of 2014 equalization rates, which reflect the average percentage of market value used in assessing. The data indicate that over 72 percent of all assessing units now have assessments that are at least 75 percent of current market value. Although there are some assessing units with assessments that are well below market value but which are still uniform and equitable, experience has demonstrated that current market assessments are strongly correlated with equity, and the level of assessment findings thus support the Table 4 data on assessment uniformity.

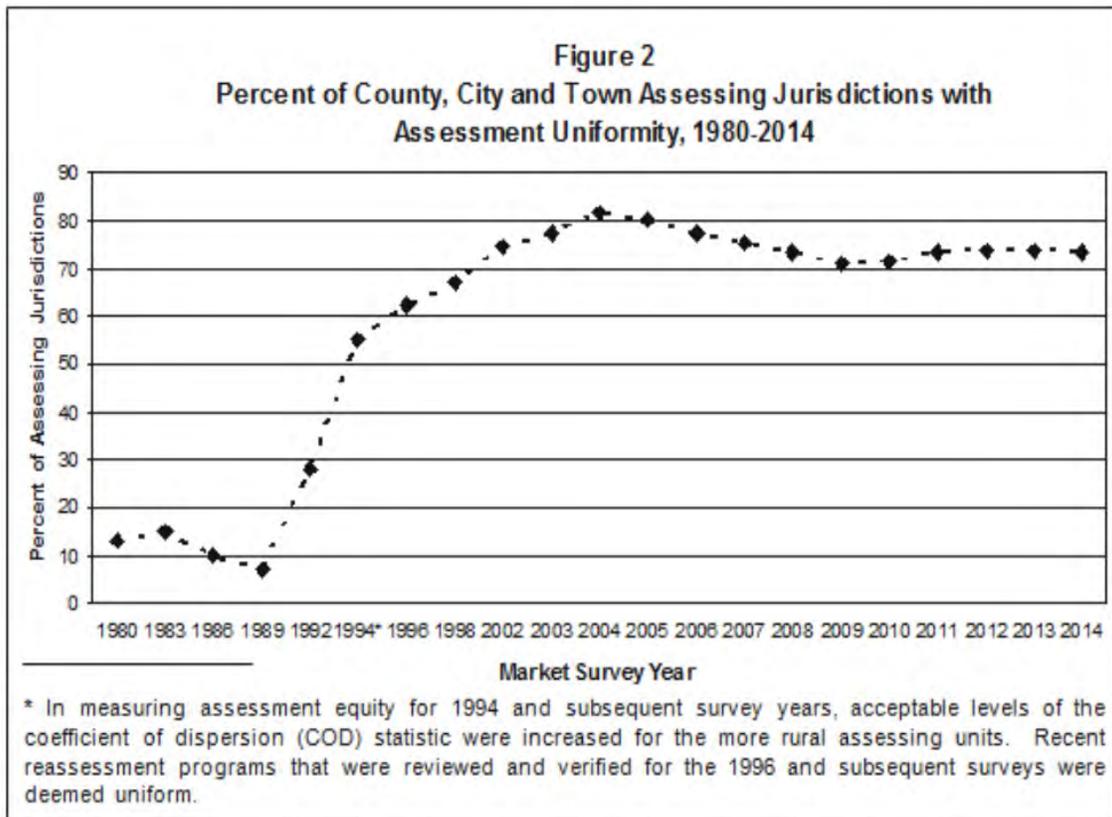

The 88 assessing units having a level of assessment of 25% or less probably have decades-old rolls, i.e., no general reassessment program has likely been conducted in a great many years. The additional 44 having a level of assessment in the 25% to 50% range are also very outdated, even in areas of the State with rapidly appreciating real estate markets.

Table 5. Level of Assessment, as Measured by 2014 State Equalization Rate

Level of Assessment	Number of Assessing Units*	
0.00 - 10.00	54	(5.5%)
10.01 - 25.00	34	(3.5%)
25.01 - 50.00	44	(4.5%)
50.01 - 75.00	137	(14.0%)
75.01 - 100.00	681	(69.4%)
Greater than 100.00	31	(3.1%)
Total	981	(100%)

*Data for the individual municipalities within a Coordinated Assessment Program (CAP) are reported. Data for special assessing units of Nassau County and New York City are excluded.

Figure 2 shows the trend in assessment uniformity among New York assessing units since 1980. In the 1980s, only about 10 percent of all assessing units had acceptable uniformity. Dramatic improvement occurred in the early 1990s however, and by 2004, over 80 percent of all assessing units were assessing uniformly. There were modest declines thereafter, in a context of turbulent real estate market conditions in some areas, which persist to the present day. It is believed that real estate market volatility is the primary reason for the noticeable decline in uniformity in recent years.

Price-Related Differential Results

As indicated earlier, another important summary statistic for assessment performance is the price-related differential (PRD). The PRD is calculated by dividing the simple mean assessment ratio by the weighted mean ratio, where the weighted mean is the sum of assessed values divided by the sum of sales prices and/or appraised values. The simple mean counts the ratio of each property equally, regardless of the property’s value, whereas the weighted mean counts each ratio differently, weighting ratios of higher-value properties more heavily, in proportion to their dollar value. If no assessment bias exists, the two mean ratios should be equal, producing an index of 1.00. Where there is evidence of a bias in favor of under-assessing the higher-value properties relative to the lower-value ones, the simple mean ratio will be higher than the value-weighted mean ratio, producing an index greater than 1.00 (regressivity). The reverse will be true in cases of over-assessment of high-value properties relative to those of low-value (progressivity). IAAO suggests that the PRD have a value between .98 and 1.03 for neutral assessing.

Table 6 summarizes the extent of value-related equity as measured by the PRD for the sampled assessing units. About 41 percent of the sampled assessing units assessed residential property in a neutral manner, i.e., they generally did not tend to favor either high- or low-value properties. However, 58 percent tended to over-assess low-value homes relative to high-value homes, while only two units tended to do the reverse. These results are similar to those found in the prior market value survey.

Table 6. Value-Related Bias in Assessing, Sampled Assessing Units, 2014 Market Value Survey

Price-Related Differential	Residential Class		All Property Classes	
	Number of Assessing Units	Percent	Number of Assessing Units	Percent
Progressive	2	1%	75	17%
Neutral	179	41%	154	36%
Regressive	248	58%	200	47%
TOTAL	429	100%	429	100%

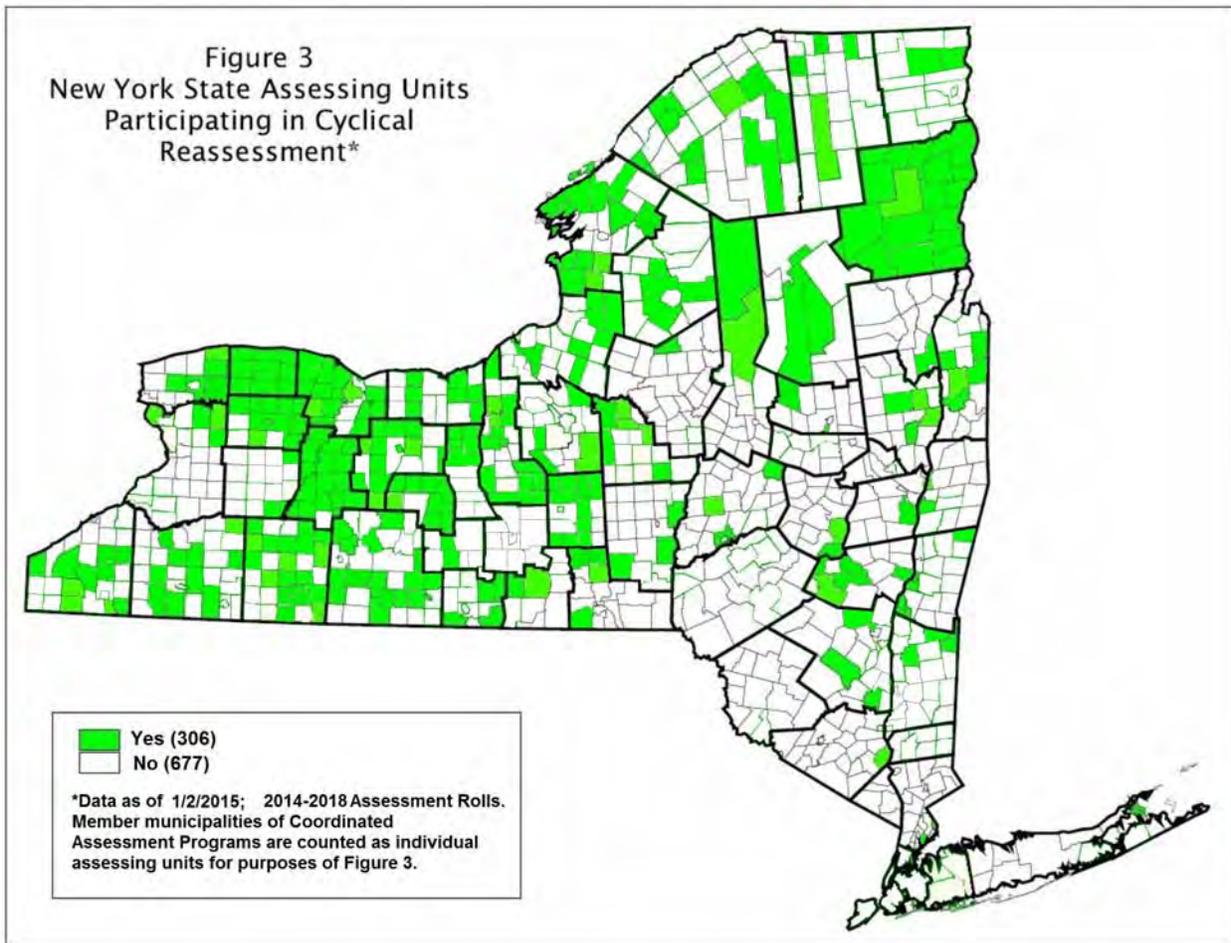

Note: Data for the individual municipalities within a Coordinated Assessment Program (CAP) are reported.

When all property classes are combined, the situation changes significantly. Table 6 shows that 17 percent of the sampled assessing units use assessing practices that are biased toward over-assessment of higher-value properties, indicating over-assessment of some non-residential classes (generally industrial, commercial and utility property). About 47 percent demonstrate the opposite behavior, regressive assessing, meaning that they tend to overvalue the lower-priced properties (generally vacant land or low-value residential parcels). The remaining 36 percent of the assessing units assess in a neutral manner with respect to value when all property classes are considered together.

Recent Reassessment Activity Subsequent to the 2014 Market Survey

Approximately 5 percent (23) of the 429 assessing units for which CODs and PRDs were calculated are conducting or plan to conduct a reassessment on a roll subsequent to the one which was utilized in the 2014 survey. For these assessing units, the COD and PRD estimates contained in this report are a measure of past assessment equity only; the level of uniformity on the newer roll may well be significantly improved from the level on the roll evaluated. Of the 554 assessing units for which recent reassessment projects were reviewed for the 2014 market value survey, 311 have scheduled a subsequent reassessment project. With the amount of the Cyclical Reassessment Aid Program, and its requirement to complete a reappraisal at least once in every four years, these subsequent reassessments will be performed on a roll completed between 2015 and 2018, depending on the schedule of the municipality's planned participation. Thus, nearly 56 percent of those that have already taken steps to maintain equitable assessing practices are projecting that they will reassess again in the next one to four years.

Figure 3 indicates the number of municipalities that have submitted plans for the Cyclical Reassessment Aid Program. As of January 2, 2015, some 306 assessing units are committed to updating their assessment rolls on a regular basis, thus ensuring that equity will be maintained as market conditions change. It should be stressed, however, that Figure 3 signifies a snapshot in time and that the data it represents are subject to continuous change.

Conclusions and Recommendations

Achievement of assessment equity in New York improved dramatically over the past thirty years, reached a peak in 2004 and, since then, has hovered around 70 to 80 percent of assessing units. Following the large gains in earlier years, there seems to have been a moderate decline in the second half of the past decade, and more than one quarter of assessing units currently have very outdated assessments. It appears that existing aid programs for quality assessment administration are no longer attracting significant numbers of new participants. Thus, it may be worthwhile for policymakers to consider additional tools to bring about greater assessment equity. Other states employ a number of such tools, and virtually all states have more requirements directed at maintenance of assessment uniformity than New York has.

Standard of Assessment

All states other than New York, New Jersey, and Pennsylvania require that a common level of assessment (most frequently, 100 percent of current market value) be applied in all assessing jurisdictions). This approach has many advantages, including, equitable tax treatment of like properties, greater taxpayer understanding of the basis of the tax, and both fair and cost-effective apportionment of taxes and state aid among local governments. It is also consistent with recommendations of the IAAO concerning the most appropriate state policies with respect to assessment standards.

Reassessment Cycle

In recognition of the fact that real estate markets are constantly changing, many states require that assessments be updated periodically. While annual updating is the ideal, actual practice usually involves cycles of two, three, four, or five years, in recognition of the time that is generally needed to accumulate sufficient market data (especially in small, rural assessing units) and the amount of work required, including data verification, valuation, outreach to property owners, and assessment appeals. While New York's aid incentive program for reassessment now provides for a four-year reassessment cycle, it must be understood that the program is not mandatory.

Direct Equalization

States using this policy tool directly change assessments on the rolls prepared by local governments, in contrast to the indirect equalization used in states such as New York, where the portion of a county or school tax levy to be borne by a particular municipality is adjusted in recognition of that municipality's overall level of assessment. The main advantage of direct equalization is that it changes the assessment, so that property owners can then compare their assessments to local market prices. A limitation, however, is that the state-level adjustments may well be quite crude factors that are applied to an entire property class or assessment jurisdiction, especially when adjustments must be made for many assessing units.

Withholding of State Payments

Rather than attempt to make rough adjustments to assessments in order to bring them to the correct market level, many states instead use monetary sanctions. These generally involve the withholding of monies that local governments would ordinarily receive from the state on an annual basis, such as state aid payments, a local share of certain state taxes, or fees that are collected by the state and sent to local governments, in whole or in part. The payments are restored only when the assessments in question are brought up to state standards.

Ordering a Reassessment

Some states simply direct a local government with faulty assessments to conduct a reassessment and, if the locality in question fails to comply with the directive, the state may hire a contractor to do the work and charge the local government for the cost of the project. Massachusetts is a nearby state where such action is the final remedy for outdated or inequitable assessments.

1) GENERAL DESCRIPTION OF REASSESSMENT

RPTL Section 102 defines a reassessment as “the systematic analysis of the assessments of all locally assessed properties, valued as of the valuation date of the assessment roll containing those assessments, to attain compliance with the standard of assessment set forth in subdivision two of Section 305, RPTL”.

1	Is there intent on the part of this assessing unit to comply with the requirements for Aid pursuant to RPTL Section 1573 (6) (2) (a)? [Y/N]	
2	Enter the assessment roll year of the most recent <i>previous</i> assessing unit-wide reappraisal. Enter NA if previous effort was more than ten years ago.	
3	Is this year’s reassessment effort a complete assessing unit-wide reappraisal? [Y/N]	
4	Is this year’s reassessment effort being assisted by a vendor? [Y/N]	
5	What was the Equalization Rate for the prior year’s assessment roll?	
6	Has the municipality adopted Article 19 (Homestead) in conjunction with this reassessment or is Article 19 already in effect?	

2) DOCUMENTATION FOR FINDINGS FOR SYSTEMATIC ANALYSIS

a. Acquisition and Maintenance of Parcel Inventory Data

Major Types A, B, and C

1	Data Items: Does the assessing unit's parcel inventory database contain all the data items specified in 9NYCRR Parts 190? [Y/N]	
	If the assessing unit is using RPS V4, answer Y and proceed to Question #2. Otherwise, complete the Checklist in Appendix A and continue to 1. a. below.	
	a. If N , what data item(s) are missing?	
	b. If N , in the reviewer's opinion, will these missing data items adversely affect the assessing unit's capacity to conduct systematic analysis? If Y to this question, provide an explanation below.	
2	Enter the assessment roll year of the last municipal-wide data collection or verification project.	
3	Enter the assessment roll year of the last municipal-wide issuance of inventory data mailers or equivalent.	

Reviewer's Summary - Acquisition and Maintenance of Parcel Inventory Data (Major Types A, B, and C)

4	State and explain your conclusion(s) as to whether the methods utilized by the assessing unit for the acquisition and maintenance of parcel inventory data are adequate.
ORPTS' Regional Reviewer:	Date:

2) c. Grouping of Inventory and Valuation Data

[Respond Y/N/NA or as appropriate.]

1	Briefly describe, below, the assessing unit's current grouping of inventory and valuation data for all but complex utility property.	
2	If groupings were geographically based, are grouping maps available?	

Reviewer's Summary - Grouping of Inventory and Valuation Data (Major Types A, B, and C)

3	State and explain your conclusion(s) as to whether the methods utilized by the assessing unit for the grouping of inventory and valuation data are adequate.	
ORPTS' Regional Reviewer:		
		Date:

2) d. Analysis of Data - *Diagnostics*

Diagnostics do not need to be performed since this year's reassessment effort is a complete assessing unit-wide reappraisal. Continue to the next section.

2) e. Applying Valuation Techniques - *Prescriptives*

[Respond Y/N/NA or as appropriate.]

1	Land Valuation				
	a. Was a “primary” land type (or equivalent) used for both improved and vacant parcels with road frontage?				
	b. Does private forestland (property class 9xx in Roll Section 1) comprise more than 10% of the assessing unit’s total assessed value? If Y, answer the following question; otherwise go to c.				
	i. Were stumpage values applied or taken into consideration?				
	c. *Method(s) used for Land Valuation				
	For improved properties, this table refers to the land component only		Major Type A	Major Type B	Major Type C
	Land Schedule				
	Comparable Sales		NA	NA	
	Allocation Method				NA
	Abstraction Method				NA
Land Residual Technique		NA		NA	
Capitalization of Ground Rental		NA		NA	

*Definitions of each of these land valuation methods can be found in the Instruction Booklet.

2) e. Applying Valuation Techniques – *Prescriptives* (Cont.)

[Respond Y/N/NA or as appropriate.]		Major Type A	Major Type B	Major Type C
2	Was the market approach utilized?			
	a. Was Comparable Sales methodology used?			
	b. Was Multiple Regression Analysis used?			
	c. Was AEP (feedback) used?			
	d. Was another methodology used? If Y , describe below.			
	e. Sales adjustment for time? If Y , describe the adjustments below.			
3	Was the cost approach utilized? If N for all Major Types, go to Question 4. If RPS Cost system used, go to Question 4.			
	a. Enter base date for cost table (MMYY)			
	b. Location multiplier used ¹ (Enter multiplier.)			
	c. Misc. multiplier/adjustment used ² (Enter multiplier.)			
	d. Was a generally accepted method of depreciation used for adjustments?			
4	Was the income approach utilized? If N or NA for all Major Types, go to Question 5.	NA		NA
	a. Was a RPS Valuation Factor File (VFF) or equivalent compiled, utilized and available?	NA		NA

¹ Adjustment factor for geographic market areas

² Any other adjustment factor used, e.g., time adjustment

2) e. Applying Valuation Techniques – Prescriptives (Cont.)

Reviewer’s Summary - Applying Valuation Techniques – Prescriptives (Major Types A, B, and C)

5	State and explain your conclusion(s) as to whether the methods utilized by the assessing unit for the prescriptive application of valuation techniques are adequate.
ORPTS’ Regional Reviewer: <input style="width: 200px;" type="text"/>	
Date: <input style="width: 100px;" type="text"/>	

2) f. Validation of Results

Reviewer’s Summary - Validation of Results (Major Types A, B and C)

1	State and explain your conclusion(s) as to whether the methods utilized by the assessing unit for the Validation of Results are adequate.
ORPTS’ Regional Reviewer: <input style="width: 200px;" type="text"/>	
Date: <input style="width: 100px;" type="text"/>	

3) DOCUMENTATION FOR FINDINGS FOR REVISION OF VALUES

1. Enter the appropriate data	Municipal Parcel Count From The Reassessment Roll	# Of Parcels Where The Assessment Has Changed	# Of Parcels Where The Assessment Has Not Changed
TOTALS	0	0	0

2	Referring to the items listed in “ <i>Project Review Documentation</i> ” (which can be found in instructions):	
	a. Did the ORPTS’ reviewer have access to, and review, All , Some or None of the listed products?	
	b. If the answer to the previous question was not All , provide an explanation as to what products were not accessible, an explanation for their absence and/or why they were not reviewed.	

4) DOCUMENTATION FOR FINDINGS FOR MAINTAINING ASSESSMENTS AT A STATED UNIFORM LEVEL

a. Tests To Confirm That Assessments Are At The Stated Uniform Percentage Of Value

1	*Latest Prior FVM Data			Reassessment Roll Data**			Percent Change in Market Value (B-A)/A
	Major Type	No. of Parcels	Market Value A	Percent of Total	No. of Parcels	Assessed Value at 100%** B	
A			#DIV/0!			#DIV/0!	#DIV/0!
B			#DIV/0!			#DIV/0!	#DIV/0!
C			#DIV/0!			#DIV/0!	#DIV/0!
D			#DIV/0!			#DIV/0!	#DIV/0!
TSOL			#DIV/0!			#DIV/0!	#DIV/0!
Totals	0	\$0	#DIV/0!	0	\$0	#DIV/0!	#DIV/0!

*The full value measurement data to be entered is that data used to derive last year's equalization rate.

**If stated uniform percentage found on the cover of this document is not 100%, divide the actual assessed value for each Type by the stated uniform percent to obtain the assessed value at 100%.

2	Identify the source of the Reassessment Roll Data [Enter Y for the appropriate source.]		
a. Assessment disclosure file		c. Final roll file	
b. Tentative roll file		d. Other (Identify)	

3	Comparison of the Change Between Previous Year's Municipal Full Value and Reassessment Roll Assessed Value Totals (from question a. 1 above) vs. the ORPTS' FVM Trend From Last Year to the Current Year by Major Type		
	A Residential	B Commercial	C Vacant
Change in Value			
Current Year FVM Trend			
Difference			

4	Explanation of differences (only necessary if difference in table above > +/- 10 percentage points)
Explanation of the Difference for Major Type A	

4 a) Tests to Confirm That Assessments Are At The Stated Uniform Percentage of Value (Cont.)

Explanation of the Difference for Major Type B

Explanation of the Difference for Major Type C

4) DOCUMENTATION FOR FINDINGS FOR MAINTAINING ASSESSMENTS AT A STATED UNIFORM LEVEL

b) Complex (Large) Parcel Review - For Major Type A

Copy and complete a separate form for each Major Type A, B and/or C in this assessing unit that has a complex (large) parcel. All parcels in the same Major Type that fit the description of complex (large) should be included on the same form. Major Type D parcels will be reviewed by the SVS Reviewer in Appendix B.

[Respond Y/N/NA or as appropriate.]

1	Record the following values for any parcel(s) or economic units that represent 10% or more of the total market value or 10% or more of the total assessed value of the entire assessing unit as indicated in the FVM/AV comparison table. (Include larger T-units from the latest previous survey that do not meet the 10% criteria but are valued at \$5,000,000 or more.)				
	Major Type	A	(A) ORPTS' Determination of Value	(B) Local Assessed Value @ 100% of Market Value	(C) Dollar Difference (absolute value) (A) - (B) = (C)
	Parcel Identification				
	1				
	2				
(D) Total Dollar Difference:				0	
2	Describe the source of ORPTS' Opinion of Value given above in Question #1:				
	1				
	2				
3	In the table above, if the "ORPTS' Determination of Value" does not equal the "Local Assessed Value", indicate below with an X the source of the Local Value determination.				
	Local Value (Appraisal)	Court Ordered Assessment	Negotiated Settlement	Other (Please specify)	
	1				
	2				
4	Describe the documentation available for the item(s) checked in Question #3:				
	1				
	2				

4) b. Complex (Large) Parcel Review - For Major Type A (Cont.)

5	Is the assessing unit's inventory for the above parcel(s) current, accurate and complete? [Y/N] If N for any parcel, provide explanation below:	
6	Were acceptable valuation practices employed for the above parcels? [Y/N] If N for any parcel, provide explanation below:	
7	Is the value of any of the above parcels currently in litigation? [Y/N] If so, provide a list of these parcels in the space below showing to which year(s) the litigation applies and indicate whether appraisals for each parcel have been exchanged between the litigating parties.	
8	Enter the total ORPTS' determination of Market Value for this Major Type in the assessing unit. (See example in the Instructions.)	
9	Calculate and enter 10% of the Question 8 value. (This will be the dollar amount above and below 100% of market value that still falls within acceptable IAAO standards for Level of Assessment.)	
10	Is the Total Dollar Difference in Question 1(D) of this section greater than the dollar amount in Question #9? [Y/N]	
<p>If the answer to Question 10 is Y, then it is highly probable that this discrepancy in opinion of value is large enough to justify a recommendation for an Alternate Uniform Percentage other than the Stated Uniform Percentage of Value for this Major Type. This information would be included in the documentation for the Reviewer's Summary for this Major Type.</p>		

4) DOCUMENTATION FOR FINDINGS FOR MAINTAINING ASSESSMENTS AT A STATED UNIFORM LEVEL

b) Complex (Large) Parcel Review - For Major Type B

Copy and complete a separate form for each Major Type A, B and/or C in this assessing unit that has a complex (large) parcel. All parcels in the same Major Type that fit the description of complex (large) should be included on the same form. Major Type D parcels will be reviewed by the SVS Reviewer in Appendix B.

[Respond Y/N/NA or as appropriate.]

1	Record the following values for any parcel(s) or economic units that represent 10% or more of the total market value or 10% or more of the total assessed value of the entire assessing unit as indicated in the FVM/AV comparison table. (Include larger T-units from the latest previous survey that do not meet the 10% criteria but are valued at \$5,000,000 or more.)				
	Major Type	B	(A) ORPTS' Determination of Value	(B) Local Assessed Value @ 100% of Market Value	(C) Dollar Difference (absolute value) (A) - (B) = (C)
	Parcel Identification				
	1				
	2				
(D) Total Dollar Difference:				0	
2	Describe the source of ORPTS' Opinion of Value given above in Question #1:				
	1				
	2				
3	In the table above, if the "ORPTS' Determination of Value" does not equal the "Local Assessed Value", indicate below with an X the source of the Local Value determination.				
	Local Value (Appraisal)	Court Ordered Assessment	Negotiated Settlement	Other (Please specify)	
	1				
	2				
4	Describe the documentation available for the item(s) checked in Question #3:				
	1				
	2				

4) b. Complex (Large) Parcel Review - For Major Type B (Cont.)

5	Is the assessing unit's inventory for the above parcel(s) current, accurate and complete? [Y/N] If N for any parcel, provide explanation below:	
6	Were acceptable valuation practices employed for the above parcels? [Y/N] If N for any parcel, provide explanation below:	
7	Is the value of any of the above parcels currently in litigation? [Y/N] If so, provide a list of these parcels in the space below showing to which year(s) the litigation applies and indicate whether appraisals for each parcel have been exchanged between the litigating parties.	
8	Enter the total ORPTS' determination of Market Value for this Major Type in the assessing unit. (See example in the Instructions.)	
9	Calculate and enter 10% of the Question 8 value. (This will be the dollar amount above and below 100% of market value that still falls within acceptable IAAO standards for Level of Assessment.)	
10	Is the Total Dollar Difference in Question 1(D) of this section greater than the dollar amount in Question #9? [Y/N]	
<p>If the answer to Question 10 is Y, then it is highly probable that this discrepancy in opinion of value is large enough to justify a recommendation for an Alternate Uniform Percentage other than the Stated Uniform Percentage of Value for this Major Type. This information would be included in the documentation for the Reviewer's Summary for this Major Type.</p>		

4) DOCUMENTATION FOR FINDINGS FOR MAINTAINING ASSESSMENTS AT A STATED UNIFORM LEVEL

b) Complex (Large) Parcel Review - For Major Type C

Copy and complete a separate form for each Major Type A, B and/or C in this assessing unit that has a complex (large) parcel. All parcels in the same Major Type that fit the description of complex (large) should be included on the same form. Major Type D parcels will be reviewed by the SVS Reviewer in Appendix B.

[Respond Y/N/NA or as appropriate.]

1	Record the following values for any parcel(s) or economic units that represent 10% or more of the total market value or 10% or more of the total assessed value of the entire assessing unit as indicated in the FVM/AV comparison table. (Include larger T-units from the latest previous survey that do not meet the 10% criteria but are valued at \$5,000,000 or more.)				
	Major Type	C	(A) ORPTS' Determination of Value	(B) Local Assessed Value @ 100% of Market Value	(C) Dollar Difference (absolute value) (A) - (B) = (C)
	Parcel Identification				
	1				
	2

3	Sales Analysis for Major Types B and C (Answer the first question and then enter results only if statistical confidence tests are met)	
Statistical Measure	B Commercial	C Vacant
Did the ratio meet statistical confidence tests? (Y/N)		
Number of Sales		
P.R.D.		
C.O.D.		
Average Assessed Value		
Average Sale Price		
Median Ratio		
Z-Value for Uniform Percent		

- (1) All sales used in the Z-Test analysis are valid, ratio usable and are from a one year period consistent with the one year period used for sales ratio analysis used for Major Type A. Assessed values are from the reassessment roll. Sales in a major type with 40 or more sales have been trimmed to remove the highest (2.5%) and lowest (2.5%) ratio sales.

4) c. Statistical Analysis of Results – Major Types A, B, and C (Cont.)

4	Conformity with Uniformity Acceptability	
	a. Referring to the Sales Ratio C.O.D. and P.R. D. figures on the previous pages for Major Types A, B, and C, do the local reassessment values meet IAAO ratio study performance standards for assessment uniformity? [Y/N/NA] NA means that not enough data was available to draw conclusions directly from this analysis.	
	A - Residential	
	B - Commercial/Industrial	
	C - Farm/Vacant	
	b. If the answer to the previous question was <u>not</u> [Y] for any Major Type, can the reviewer determine that the reassessment values in that Major Type are uniform using an alternate procedure? [Y/N/NA] NA means that the Major Type has already met ratio study standards in the previous question.	
	A - Residential	
	B - Commercial/Industrial	
	C - Farm/Vacant	
	c. Give an explanation (and data, if appropriate) for any Major Type where an alternative procedure indicates Uniformity acceptability. Include a description of that alternative procedure.	

4) c. Statistical Analysis of Results - Major Types A, B, and C (Cont.)

5	Conformity with Level Acceptability	
	a. Referring to the statistics (Mean Ratio, Median Ratio, Weighted Mean Ratio, etc.) on the previous pages for Major Types A, B, and C, do the local reassessment values conform with the locality's stated uniform percentage of value in accordance with IAAO ratio study performance standards? [Y/N/NA] NA means that not enough data was available to draw conclusions directly from this analysis.	
	A - Residential	
	B - Commercial/Industrial	
	C - Farm/Vacant	
	b. If the answer to the previous question was <u>not</u> [Y] for any Major Type, can the reviewer determine that the reassessment values in that Major Type conform with the stated uniform percentage of value using an alternate procedure? [Y/N/NA] NA means that the Major Type has already been confirmed in the previous question.	
	A - Residential	
	B - Commercial/Industrial	
	C - Farm/Vacant	
	c. Give an explanation (and data, if appropriate) for any Major Type where an alternative procedure indicates Level acceptability. Include a description of that alternative procedure.	

4) d. Alternate Uniform Percentage Recommendation

Test Of Level Of Assessment At An Alternate Uniform Percentage Of Value: Record the corresponding information in the table below only if an Alternate Uniform Percentage is being recommended and is supported by the z-value statistic generated with the SIMFVM analysis. Enter the reasons why an Alternate Uniform Percentage of Value is being recommended on the respective Major Type Reviewer's Summary.

Major Type	Alternate Uniform Percentage	No. of Sales	Z-Value For Alternate Uniform Percentage
A

7) INTER-CLASS ASSESSMENT UNIFORMITY ATTESTATION FOR STATE AID

(Not to be used for Special Assessing Units)

1 Complete the table below by entering data in the "Municipal Full Value", "Uniform Percentage" and "ORPTS' Full Value Determination" columns for each major Type and TSOL, or use "auto-load".

Major Type	Municipal Full Value	Uniform Percentage	ORPTS' Full Value Determination	Percent FV
A				
B				
C				
D				
TSOL				
Totals				

2) Are the assessing unit's aggregate full values from the reassessment roll being used in Full Value Measurement at a Uniform Percentage of 100% for Major Types A, B, C and D and TSOL (if any)?

YES NO

If Yes, assessing unit meets uniformity criteria for State Aid purposes.

If No, proceed to Question 3.

3) Are the assessing unit's aggregate full values from the reassessment roll being used at a Uniform Percentage of 100% for all but one Major Type of property?

YES NO

If No, assessing unit does NOT meet uniformity criteria for State Aid purposes.

If Yes, proceed to Question 4.

4) Calculate the percentage difference between the assessing unit's estimate of municipal full value on the reassessment roll (a) and ORPTS' determination of municipal full value on the reassessment roll (b).

Let a = assessing unit's estimate of municipal value on the reassessment roll

Let b = ORPTS' determination of full value on the reassessment roll

Calculate: $[(a-b)/b] \times 100 = \% \text{ Difference}$

$[(\text{_____} \text{ minus } \text{_____}) / \text{_____}] \times 100 = \text{_____} \% \text{ Difference}$

Is the calculated percentage difference two percent or less?

YES NO

If Yes, assessing unit meets uniformity criteria for State Aid purposes.

If No, proceed to Question 5.

7) INTER-CLASS ASSESSMENT UNIFORMITY ATTESTATION FOR STATE AID (Cont.)

5) Is the class in question Major Type A (Residential property)?

YES

NO

If Yes, assessing unit does NOT meet uniformity criteria for State Aid purposes.

If No, proceed to Question 6.

6) On which class of property is there disagreement? (Check one and go to 6a or 6b.)

Major Type B

Major Type C

Major Type D

TSOL

a) If Major Type B, C or TSOL, is the percentage difference calculated in question 4 equal to 10 percent or less?

YES

NO

If Yes, assessing unit meets uniformity criteria for State Aid purposes.

If No, assessing unit does NOT meet uniformity criteria for State Aid purposes.

b) If Major Type D, is the percentage difference calculated in question 4 equal to 20 percent or less?

YES

NO

If Yes, assessing unit meets uniformity criteria for State Aid purposes.

If No, assessing unit does NOT meet uniformity criteria for State Aid purposes.

ORPTS' Regional Reviewer:		Date:	
---------------------------	--	-------	--

8) SUMMARY OF COMPLIANCE WITH CRITERIA FOR STATE AID

Findings for Compliance with Statute and Rules

With respect to the following State aid criteria affecting compliance with Statute and Rules, ORPTS finds as follows:								Y/N/NA
1	All property is assessed at a uniform percentage of 100 or meets the provisions of paragraph 2(4) of the ORPTS Procedures for State Assistance for the Maintenance of a System of Improved Real Property Tax Administration pursuant to the State Board Rules Effective with 1999 Assessment Rolls (9NYCRR 201-2).							
	MT A	0.00%	MT B	0.00%	MT C	0.00%	MT D	0.00%
	Class 1	0.00%	Class 2	0.00%	Class 4	0.00%	Class 3	0.00%
2	Frequency of Sales reporting: sales are reported to ORPTS in a mechanized format on at least a quarterly basis.							
3	Percentage of arms-length sales reported: at least 90% of the arms-length sales that occur between prior final roll and current final roll (current roll is defined at the assessment roll year for which the application is being made) are reported to ORPTS.							
	Actual Percent							0.00%
4	Assessor's reports are in compliance with Part 193 of the State Board's rules, in particular, that parts 1 and 2 are filled within 30 days of the filing of the final roll and are reconciled by ORPTS staff.							
5	Valid exemption codes are on 95% of the parcels receiving exemptions.							
	Actual Percent							0.00%
6	15-C file (mechanized assessment roll file, in RPS or other approved format that includes assessment and sale and parcel inventory) is submitted within 30 days of the filing of final roll.							
7	Assessment roll preparation meets the requirements of 190-1.2 and 190-1.3 of rules, including (but not limited to) parcel identification, property classification codes, school codes, roll sections and assessed value entry.							
8	Assessment disclosure notices as required by RPTL Section 511 were sent and required Meetings were held.							
9	Was this year's reassessment effort a complete assessing unit-wide appraisal?							

Regional Manager's Determinations

Based on the findings and recommendations on the preceding pages, I have made the following determinations:	Y/N
Does this assessing unit meet the uniformity criteria for State Aid purposes?	
Has the assessing unit substantially complied with statutes and rules as outlined in 9NYCRR 201-2?	

Regional Manager's Summary of Findings and Recommendations:

It is determined that the City/Town of _____, _____ County;

- qualifies for State Aid for its 20XX assessment roll based upon the findings of staff and for the reasons discussed in my conclusion included herein.
- does *not* qualify for State aid for its 20XX assessment roll based upon the findings of staff and for the reasons discussed in my conclusions included herein.

APPENDIX A – MINIMUM INVENTORY DATA ITEM CHECKLIST

Complete this two page Checklist only for assessing units that are *not* using RPSV4. Indicate with a Y or N whether each of the following data items is included in the assessing unit’s database.

Property Characteristics (Residential/ Farm/Vacant)			
Land Characteristics		Residential Building Characteristics	
Land type code or description		Building style	
Land size		Exterior wall material	
Waterfront type(if appropriate)		Year built	
Soil rating (if appropriate)		Number of baths *	
Influence code and percent (if appropriate)		Fireplace (yes/no) *	
Site Characteristics (except for farms)		Sketch with Measurements	
Sewer (if not available to all)		Heat type *	
Water (if not available to all)		Basement type	
Utilities (if not available to all)		Overall condition	
Site desirability		Overall grade	
Neighborhood type (if used)		Square feet of living area	
Neighborhood rating (if used)		Improvements Characteristics	
Zoning (if used)		Structure code or description.	
		Size	
		Year built	
		Condition	

*Does not apply to New York City

APPENDIX A – MINIMUM INVENTORY DATA ITEM CHECKLIST (Cont.)

Property Characteristics (Commercial/Industrial)			
Land Characteristics		Building Characteristics	
Land type code or description		Cost model, or frame and wall material	
Land size		Effective Year Built	
Waterfront type (if appropriate)		Construction quality	
Soil rating (if appropriate)		Gross floor area or cubic feet	
Influence code and percent		Number of stories or cubic feet	
Site Characteristics		Story height or cubic feet	
“Used as” code or description		Basement type	
Overall desirability		Basement square feet	
Overall condition		Sketch	
Overall effective year built		Improvement Characteristics	
Overall grade		Structure code or description	
		Size	
		Year Built	
		Condition	
Rentable area			
All Parcels Except Apartments		All Apartments

Local Reassessment Project Review and Analysis VSD Segment

Assessing Unit:

SWIS or CAP Code:

County:

Assessment Year Reviewed:

Reviewer:

Review Completion Date:

1) General Description of Reassessment

1	Indicate whether advisory appraisals were requested for All, Some or No properties in Major Type D. [Answer A, S, or N]	
2	a) Has a UCARS effort already been completed in this assessing unit? [Y/N]	
	b) If “ N ”, then in what assessment roll year does this assessing unit propose to complete its UCARS effort?	

2) a. Acquisition and Maintenance of Parcel Inventory Data

If Advisory Appraisals were requested and used, enter NA in the questions below

1	Does the assessing unit meet the standards for inventory and valuation data for utility properties as specified in 9NYCRR Part 190-1.1? Note: See Appendix VSD for list of data items. [Y/N/NA]	
----------	--	--

VSD Reviewer’s Summary - Acquisition and Maintenance of Parcel Inventory Data (Major Type D)

2	For Major Type D , is the inventory information of sufficient quality and consistency for use in valuing complex public utility property? [Y/N/NA]	
	If answer is N , explain below.	
ORPTS’ VSD Reviewer:		
		Date:

2) e. Applying Valuation Techniques – Prescriptives

Respond NA to the following question if advisory appraisals were not requested.

1	Were all of the ORPTS' advisory appraisals for Major Type D that the assessing unit requested used in their entirety? [Y/N/NA]	
----------	---	--

To be completed if advisory appraisals were not used in their entirety or not requested.

2	For Major Type D : State your conclusion(s) as to whether the methods utilized by the assessing unit for the prescriptive application of valuation techniques are adequate.		
ORPTS' VSD Reviewer:		Date:	

4) e. Utility Value Reconciliation [VSD Reviewer will input (cut and paste) an Excel spreadsheet if advisory appraisals were not used for all utility properties.]

5) REVIEWER'S SUMMARIES FOR FULL VALUE MEASUREMENT (Cont.)

Reviewer's Summary - Major Type D (To be completed by VSD Reviewer)

Recommendation for Major Type D – Utility			
Accept local reassessment values at the recommended Uniform Percentage of:			%
If the recommended Uniform Percentage is not the Stated Uniform Percentage, explain below.			
ORPTS' VSD Reviewer:		Date:	

6) FULL VALUE MEASUREMENT ATTESTATION

Major Type D

Approval Statement:

I have reviewed the attached materials and provide the corresponding recommendation for Major Type D.

Appendix B — Measuring Assessment Uniformity from Market Survey data: Weighted Coefficient of Dispersion

APPENDIX B

MEASURING ASSESSMENT UNIFORMITY FROM MARKET SURVEY DATA: WEIGHTED COEFFICIENT OF DISPERSION

1. Computing the Coefficient of Dispersion

The coefficients of dispersion (CODs) contained in this report are calculated from the estimates of market value (sales, appraisals, and Computer Assisted Mass Appraisal (CAMA) estimates) derived in the New York State Board of Real Property Tax Services' 2014 market value survey. "Weighted" CODs for the entire assessment roll are calculated when appraisals and/or sales are available and are used to reflect the composition of each assessment roll appropriately, as rolls may be stratified by property type and value category for survey purposes. In contrast, CODs calculated through CAMA need not be weighted as they use data for all the parcels for which values are being predicted.

The general formula for a coefficient of dispersion around the median assessment ratio is:

$$(1) \text{ COD} = \frac{100}{R_m} \left[\frac{\sum_{i=1}^N |R_i - R_m|}{N} \right]$$

where:

COD = coefficient of dispersion, i.e., the average percent of dispersion around the median assessment ratio;

R_m = median assessment ratio;

R_i = observed assessment ratio for each parcel;

N = number of properties sampled.

This general formula is usually applied in estimating the COD from non-stratified sales data, where the true representativeness of each sale is unknown. Where a sales ratio analysis was used directly in the survey (residential property only), the formula above describes the residential COD calculation accurately. Where a stratified sample was used and the

representativeness of each sampled parcel is known, the formula can be modified by weighting each of the observed assessment ratios as follows:

Let i = the sampled parcel, j = the stratum, and R_{ij} = the assessment ratio of the i^{th} parcel in the j^{th} stratum.

Let w_j = p_j / s_j , where:

p_j = the total number of parcels on the assessment roll in the j^{th} stratum;

s_j = the number of sampled j^{th} stratum.

Let \bar{w} = the total number of parcels on the roll divided by the total number sampled (i.e., the reciprocal of the overall sampling ratio).

The weight (w_j) is calculated for each stratum, and is identical for all sampled parcels within it. For example, in a municipality where there are 600 residential parcels in the assessed value range of \$40,000 to \$80,000, and six of them are selected in a random sample, then each of the six sample ratios would have a weight of 100 because it is assumed to represent 100 of the parcels in that range (stratum).

Since i signifies the sampled parcel and j the stratum it was selected from, the assessment ratio for a given observation will thus be R_{ij} . As in the case of formula (1) above, we must calculate the absolute difference between R_{ij} and R_m . Then, these differences are adjusted to reflect the composition of the entire roll rather than the sample by applying to each the ratio w_j / \bar{w} . For all observations within each of the i strata, the formula for the weighted coefficient of dispersion around the median thus becomes:

$$(2) \text{ COD}_w = \frac{100}{R_m} \left[\frac{\begin{array}{ccc|c} i & j & w_j & |R_{ij} - R_m| \\ \Sigma & \Sigma & \frac{w_j}{\bar{w}} & \\ 1 & 1 & \bar{w} & \end{array}}{N} \right]$$

The procedure for calculating the weighted coefficient for each assessing unit entails the following steps.

1. Calculate the assessment ratio (R_{ij}) for each sample parcel by dividing the assessed value by the estimated market value.

2. Array the assessment ratios from lowest to highest within each assessing unit.
3. Calculate the weight (w_i) for each stratum and \bar{w} , representing the total number of parcels on the roll divided by the size of the sample.
4. Normalize the weight of each sampled parcel by dividing by (\bar{w}).
5. Select the median assessment ratio (R_m) from the weighted list (length of list equals the total number of parcels sampled.)
6. Apply equation (2) above.

It is important to note that the median assessment ratio as used in equation (2) will not necessarily be the same as the median of the sampled ratios, i.e., as used in equation (1). The former median, from the "weighted" list of appraisals, reflects the weighting applied to achieve equal representativeness in the population.

For cases where the stratification process is embedded even further, such as multiple school district portions within an assessing unit, the calculations embodied in these equations entail additional subscripts. However, the general form of the equation remains the same. Once again, the purpose of weighting is to correct, to some degree, the deficiencies of the sampling procedures from the standpoint of measuring uniformity, i.e., to construct a measure built upon equally-likely selection of each parcel from an assessment roll.

In instances where CAMA model estimates were used in lieu of regular appraisals (residential property only), the COD calculation procedure was modified as follows: (1) a residential COD was computed for the modeled residential parcels, according to the formula in equation (1) above; (2) a non-residential COD was computed for the remaining parcels using the formula given in equation (2) above; and (3) to compute an all-property weighted COD, these two COD estimates were combined through weighting them according to relative parcel numbers.

II. Computing the Price-Related Differential

The price-related differential (PRD) is used to determine if there is a price-related bias in a municipality's assessing practices. It compares the simple mean of the assessment ratios to the price-weighted mean ratio. If no bias exists, the two figures will be virtually equal and the PRD would be close to one (1.0), indicating assessment neutrality. If a municipality tends to over-assess higher valued properties, the price-weighted mean will be higher than the simple mean and an index of less than 1.0 will result (indicating progressivity). The opposite occurs

when higher-valued properties are consistently under-assessed. In this case, the price-weighted mean will be lower than the simple mean and the result will be an index which is greater than 1.0, indicating regressivity.

Example of Price-Related Differential Values

	<u>Regressive Greater than 1.03</u>	<u>Neutral 0.98 to 1.03</u>	<u>Progressive Less than 0.98</u>
Ratios:			
a. Simple Mean	.70	.70	.70
b. Price-weighted Mean	.58	.68	.85
Price-Related Differential (a / b)	1.21	1.03	0.82

The formula for the price-related differential uses the same weighting process previously described in relation to the coefficient of dispersion:

$$(3) \text{ IR} = \frac{\frac{\sum_{i=1}^i \sum_{j=1}^j \left(R_{ij} \cdot \frac{w_j}{w} \right)}{N}}{\frac{\sum_{i=1}^i \sum_{j=1}^j \left(ASV_{ij} \cdot \frac{w_j}{w} \right)}{\sum_{i=1}^i \sum_{j=1}^j \left(APV_{ij} \cdot \frac{w_j}{w} \right)}} = \frac{\text{Simple Mean}}{\text{Weighted Mean}}$$

where:

- N = the total number of sampled properties;
- i = the sampled parcel;
- j = the stratum;
- w_j = the weight of every sampled parcel drawn from the jth stratum (see previous discussion of sample weighting in relation to COD);
- $\frac{w_j}{w}$ = the total number of parcels in a stratum divided by the total number sampled in that stratum (see previous discussions of sample weighting in relation to COD);

- R_{ij} = ratio of assessed value to estimated market value (appraisal or sale) (one for each sampled property in each stratum);
- ASV_{ij} = assessed value of the "ith" sampled property in the jth stratum; and
- EMV_{ij} = estimated market value of the "ith" sampled property in the jth stratum.
