Introduction

This publication is the first in a series of corporate tax statistical reports to be published by the Department of Taxation and Finance's Office of Tax Policy Analysis (OTPA). The reports are intended to provide a detailed summary of corporate tax results both for policymakers and the interested public. It will provide users with data to aid in their analysis of corporate tax policy changes.

The tables in this report present tax statistics for Article 9 (the corporation and utilities tax), Article 32 (the franchise tax on banking corporations), and Article 33 (the franchise tax on insurance companies). For each tax, a narrative discussion accompanies the tables.

This publication provides data users with historical data not previously published. It covers multiple tax year periods. It takes the dates from the last published period up to the most currently available period. This period varies by tax.

Article 9: Corporation and Utilities Tax

Tax statistics provided for Article 9 taxpayers are presented for the 1989-1992 tax years. The tables include data regarding the number of taxpayers and total tax liability by industrial sector. The industry sectors include pipeline, telephone and trucking, railroad, water transportation, electricity and natural gas, and a miscellaneous category.

Article 32: Franchise Tax on Banking Corporations

The Article 32 tables provide historical tax statistics by type of bank for the 1988-1992 tax years. The tables include the number of taxpayers and total tax liability, the distribution of tax liability by tax base, income statistics, and credits used by all Article 32 taxpayers. The types of banks include clearinghouse banks, foreign banks, commercial banks, savings banks, and savings and loan associations.

Article 33: Franchise Tax on Insurance Companies

The Article 33 tables provide tax statistics for the 1987-1991 tax years. The tables include tax liability before limitation and credits, the percent of total Article 33 tax liability derived from the premiums base, and the amount of adjustments for limitations and credits by type of insurer. Types of insurers include, for example, property and casualty insurers, life insurers, and accident and health insurers.

Temporary Surcharges

The tax statistics presented in this report do not include the temporary surcharges (the 2.5 percent surcharge that applied to the pre-credit liability of Article 32 and 33 taxpayers in 1989, the temporary 15 percent surcharge that applied to the post-credit liability of Article 9, Article 32 and Article 33 taxpayers beginning in 1990, and the 17 percent Metropolitan Commuter Transportation District (MCTD) surcharge imposed since 1982). The surcharges were not included in the tax statistics to maintain consistency in OTPA's tax liability reporting over the periods covered in this report. The calculation of the temporary 15 percent surcharge from data reported in the statistical tables is straightforward. Data users may compute the value of the temporary 15 percent surcharge by multiplying total tax liability by 1.15. Data users cannot determine the value of the temporary 2.5 percent surcharge and the MCTD surcharge from the statistical tables because pre-credit tax liability data is not presented and because tax liability data for business activity conducted in the MCTD is not readily available.

Article 9: Corporation and Utilities Tax

Tax Structure¹

Article 9 contains several separate taxes that apply to various general and specialized businesses operating in New York State. These taxes appear in separate sections of Article 9 as follows:

- *Section 180* organization tax on domestic (New York State) corporations;
- *Section 181* license fee on foreign (out-of-state) corporations;
- *Section 183* franchise tax on transportation and transmission companies and associations;
- *Section 184* additional franchise tax on transportation and transmission companies and associations;
- *Section 185* franchise tax on agricultural cooperatives;
- *Section 186* franchise tax on waterworks companies, gas companies, electric or steam heating, lighting and power companies;
- *Section 186-a* gross receipts tax on the furnishing of utility services; and
- *Section 189* franchise tax on businesses importing natural gas for their own consumption.

Two separate surcharges also applied to these taxes for some (or all) of the tax years presented. The 17 percent temporary metropolitan commuter transportation business tax surcharge, for instance, applied to the portion of section 183, 184, 186, 186-a, and 189 taxes attributable to business activity carried on in the 12 county Metropolitan Commuter Transportation District (MCTD) for each of the tax years covered by the report.²

¹See "New York State Tax Structure: History and Comparative Analysis," prepared by the New York State Department of Taxation and Finance, Office of Tax Policy Analysis, August 1994, for more detail on this tax and its recent evolution.

²MCTD counties include: New York, Bronx, Kings, Queens, Richmond, Dutchess, Nassau, Orange, Putnam, Rockland, Suffolk, and Westchester.

Similarly, a 15 percent temporary business tax surcharge applied to section 183, 184, 186, 186-a, and 189 taxes for the tax years 1990 through 1992.³ Unlike the metropolitan commuter transportation business tax surcharge, this surcharge applied to statewide revenues under these taxes.

Description of Data

Data Availability -

This section provides summaries of taxpayer data concerning the major Article 9 taxes. Major Article 9 taxes include those imposed under sections 183, 184, 186, and 186-a. The remaining Article 9 taxes are not included herein.⁴

Data Source -

The data come from the Department of Taxation and Finance's Corporation Master Files for the tax years 1989-1992. A contracted processing bank provided the original data. All returns have been subjected to a basic calculations check necessary for verifying tax liability. However, the data are neither manually reviewed nor are missing data computed and added to the file. Therefore, these data are less reliable than that available from OTPA's other tax liability study files. Also, these data are extracted from the Department's master file, as the file existed at a point in time, and may not include amended or late filed returns.

Number of Taxpayers -

This represents the actual number of tax returns filed for each tax year, although, these data may not include some late filed returns, as previously noted. Data are compiled in the aggregate, by industry sector, for the selected tax sections of Article 9 included in the report. The data also include the respective shares that each industry sector represents in relation to the total number of taxpayers.

³The surcharge also applied in tax year 1993. However, legislation enacted in June of 1994 phases out the temporary business tax surcharge over several years. For calendar-year taxpayers, the surcharge generally drops from 15 percent to 12.5 percent for the 1994 tax year, 7.5 percent in 1995, 2.5 percent in 1996, and zero percent thereafter.

⁴Consistent with prior statistical reports, data concerning the section 180, 181, and 185 taxes are omitted from this report. The report also excludes data concerning the section 189 tax enacted in 1991. These taxes have a minimal impact on overall Article 9 liability.

Liability Data -

This represents the sum of the post-credit liability for each separate taxpayer filing a return. These data are shown in the aggregate, and for each industry sector, for the selected tax sections of Article 9. The data also include the respective shares that each industry sector represents in relation to all taxpayers.

Liability data exclude the 15 percent temporary business tax surcharge for tax years 1990 through 1992. Although, readers can easily calculate liability including this surcharge if they so desire. As liability data shown are post-credits, the reader merely has to multiply the liability figure by 1.15. Similarly, liability data exclude the temporary metropolitan commuter transportation business tax surcharge. Readers cannot calculate this surcharge, however, as the necessary geographic data are not available.

Data Classification -

Taxpayers are classified according to Principal Business/Professional Activity (PIA)⁵ and Standard Industrial Classification (SIC) codes appropriate for their industry groups. Taxpayers self report appropriate PIA or SIC codes on their tax returns. These codes identify the general type of business activity in which the entity is engaged (e.g. pipelines, telephone and telegraph, railroads, or electricity and gas). However, taxpayers often fail to provide this information.

In addition, these codes were revised several times in the last two decades. As a result, taxpayers frequently report out-dated codes. In these situations, a cursory attempt to place taxpayers into selected industry groups was performed by reviewing taxpayer names. Even then, a large number of taxpayers remained unidentified. These taxpayers were grouped with any miscellaneous taxpayers in presenting these data.

Although the number of taxpayers for whom their industry group cannot be identified is large, their associated liability is quite small. Because some of the taxpayer universe remains unidentified, only general comparisons can be made between industry sectors for each particular tax. This caveat applies to both the number of taxpayers and liability data.

⁵The Internal Revenue Service (IRS) asks taxpayers to identify their principal business activity using these codes for federal tax purposes.

Overview of Statistics

Liability Distribution by Tax Law Section

Figure 1 shows that the taxes imposed under sections 183, 184, 186 and 186-a resulted in a total liability of \$1,005.4 million tax liability for tax year 1989. Section 186-a generated the largest proportion of tax liability, at 73 percent of the total. Tax liability under section 186 accounted for 17 percent of the total while tax liability under section 184 resulted in 6 percent (\$60.2 million). Section 183 accounted for the smallest share: 4 percent (\$38.4 million).

Total Article 9 liability, excluding surcharges, increased by 31 percent to \$1,320.8 million from tax years 1989 to 1992. However, the proportions attributable to each tax did not remain constant. Section 186-a liability increased slightly and still accounted for the largest share, at 75 percent. Section 186 decreased to 13 percent of total liability. In contrast, the section 184 share of total liability grew to \$123.3 million, or 9 percent. Finally, as section 183 liability decreased to \$33.6 million, its share of total liability declined to 3 percent.

Section 183 Franchise Tax on Transportation & Transmission Corporations

The section 183 franchise tax on transportation and transmission companies applies to all companies principally engaged in providing these services (except aviation companies which are taxed under Article 9-A). The tax equals the higher of: 1) 1.5 mills on each dollar of net value of issued capital stock in New York State; or 2) if the share of dividends paid on capital stock equals 6 percent or more, a rate of 0.375 mills per dollar of par value for each one percent of dividends paid; or 3) a \$75 minimum tax.

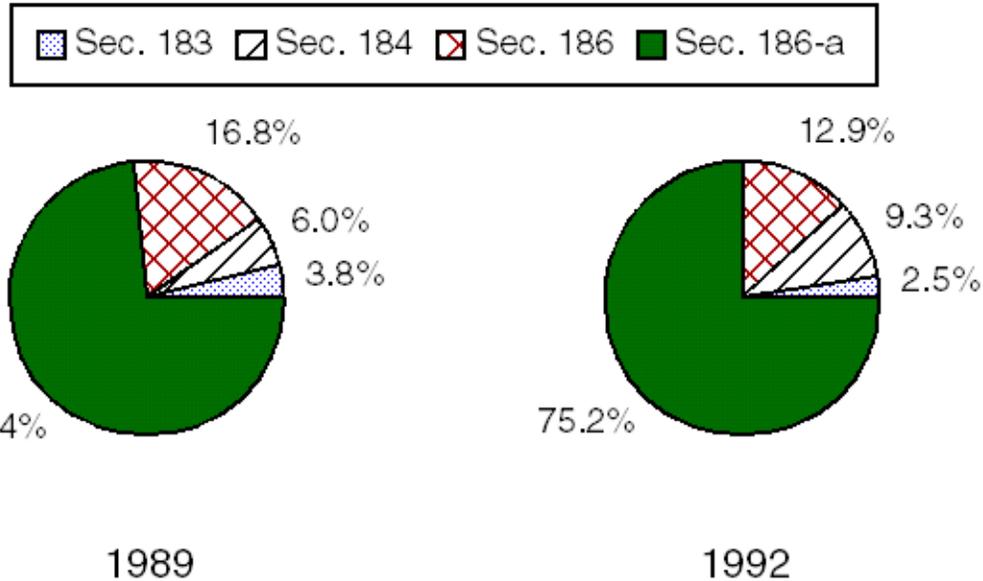

Number of Taxpayers

Table 1 presents the number of section 183 taxpayers by industry sector for tax years 1989 to 1992. Over this period, the total number of taxpayers decreased from 4,616 to 4,066, a decline of 12 percent. The vast majority of section 183 taxpayers are trucking companies. In 1989, this industry sector accounted for 3,551 taxpayers (77 percent). This number declined by 384, or 11 percent, to 3,167 taxpayers in 1992, although trucking's share of total section 183 taxpayers increased to 78 percent.

The second largest taxpayer group are miscellaneous and unidentified taxpayers accounting for 13 percent of taxpayers in 1992. The 177 telephone and telegraph companies represented 4 percent of taxpayers. The remaining industry sectors consist of water transportation (3 percent of all taxpayers), railroads (1 percent), and pipelines providing transportation services (0.7 percent).

Figure 1: Liability Distribution by Tax Law Section, Selected Article 9 Taxes: Tax Years 1989 & 1992.

Total Liability = \$1,005.4 Million (1989) and \$1,320.8 Million (1992)

Note: Figures exclude the temporary business tax surcharge (all years) and temporary MCTD surcharge (tax years 1990-92).

All Sectors	4,616	100.0%	4,422	100.0%	3,930	100.0%	4,066	100.0%

Section B: Total Tax Liability of Section 183 Taxpayers 1/
(\$ Millions)
1989-1992

Industry Sector	Tax Year 1989		Tax Year 1990		Tax Year 1991		Tax Year 1992	
	Total Tax Liability 2/	Percent						
Pipeline (Transport)	\$0.4	1.2%	\$0.7	2.0%	\$0.5	1.5%	\$0.7	2.0%
Telephone & Telegraph	35.3	91.9%	34.6	92.1%	28.2	91.1%	30.2	89.8%
Trucking	1.1	2.9%	1.1	3.1%	1.1	3.7%	1.2	3.7%
Railroad	1.0	2.7%	0.7	1.9%	0.8	2.6%	1.2	3.5%
Water Transportation	0.4	1.0%	0.3	0.7%	0.3	0.9%	0.3	0.9%
Misc./Unidentified	0.1	0.3%	0.1	0.2%	0.1	0.3%	0.1	0.2%
All Sectors	\$38.4	100.0%	\$37.5	100.0%	\$31.0	100.0%	\$33.6	100.0%

1/ Totals may not add due to rounding.

2/ Total tax liability amounts do not reflect the 15% temporary business tax surcharge that applied to post-credit liability for tax years 1990-92 or the 17% Metropolitan Commuter Transportation District surcharge that applied in all years.

Tax Liability

Table 1 also shows the total liability for section 183 taxpayers by industry sector for tax years 1989 to 1992. Total liability decreased by 13 percent between 1989 and 1992 from \$38.4 to \$33.6 million. The most pronounced year-to-year decrease occurred from 1990 to 1991 when liability decreased from \$37.5 million to \$31.0 million (17 percent). However, liability subsequently recovered to \$33.6 million, an increase of 8 percent over the 1991 low point.

The majority of section 183 tax liability is generated by the telephone and telegraph sector with 90 percent of the total in 1992. Based on liability, the next largest sectors are trucking (4 percent), railroads (4 percent), pipelines providing transportation (2 percent), and water transportation (1 percent). Although the miscellaneous and unidentified group makes up over 13 percent of the section 183 taxpayers, they account for only 0.2 percent of the tax.

Section 184 Additional Franchise Tax on Transportation & Transmission Corporations

The section 184 additional franchise tax on transportation and transmission companies applies to all companies principally engaged in providing these services. The tax rate equals 0.75 percent on gross earnings from all sources.

Number of Taxpayers

Table 2 shows the total number of section 184 taxpayers by industry sector from tax year 1989 to 1992. The total number of taxpayers showed a decrease similar to section 183 during these tax years. This is because the universes of section 183 and 184 taxpayers are virtually identical. In 1989, there were 4,698 section 184 taxpayers versus 4,059 in 1992, a decline of 14 percent.

A small disparity exists between the aggregate number of section 183 and section 184 taxpayers in each tax year. In 1989, for instance, there were 82 more section 184 taxpayers than section 183 taxpayers. This difference decreases to 17 in 1990 and 21 in 1991. Conversely, there were 7 more section 183 taxpayers than section 184 taxpayers in tax year 1992. These differences exist despite the fact that these groups of taxpayers are virtually identical. As previously noted, however, these data are taken from the Department's master file as the file existed at one point in time. As a result, differences in the number of taxpayers may persist for a number of reasons. These include, for example, the fact that some taxpayers may file their return on extension or because some taxpayers may fail to timely file all required returns.

Table 2
Section A: Number of Section 184 Taxpayers 1/
1989-1992

<u>Industry Sector</u>	<u>Tax Year 1989</u>		<u>Tax Year 1990</u>		<u>Tax Year 1991</u>		<u>Tax Year 1992</u>	
	<u>Number of Taxpayers</u>	<u>Percent</u>

All Sectors	4,698	100.0%	4,439	100.0%	3,951	100.0%	4,059	100.0%

SECTION B: TOTAL TAX LIABILITY OF SECTION 184 TAXPAYERS 1/
(\$ MILLIONS)
1989-1992

<u>Industry Sector</u>	<u>Tax Year 1989</u>		<u>Tax Year 1990</u>		<u>Tax Year 1991</u>		<u>Tax Year 1992</u>	
	<u>Total Tax Liability 2/</u>	<u>Percent</u>						
Pipeline (Transport)	\$0.4	0.6%	\$0.4	0.3%	\$0.4	0.3%	\$1.0	0.8%
Telephone & Telegraph	36.8	61.1%	94.1	79.8%	100.8	81.6%	100.2	81.2%
Trucking	20.6	34.3%	20.7	17.6%	20.2	16.3%	20.0	16.2%
Railroad	0.5	0.8%	0.7	0.6%	0.4	0.3%	0.4	0.3%
Water Transportation	0.6	0.9%	0.6	0.5%	0.6	0.5%	0.6	0.5%
Misc./Unidentified	1.3	2.2%	1.4	1.2%	1.2	1.0%	1.2	0.9%
All Sectors	\$60.2	100.0%	\$117.9	100.0%	\$123.5	100.0%	\$123.3	100.0%

1/ Totals may not add due to rounding.

2/ Total tax liability amounts do not reflect the 15% temporary business tax surcharge that applied to post-credit liability for tax years 1990-92 or the 17% Metropolitan Commuter Transportation District surcharge that applied in all years.

The industry breakdown of section 184 taxpayers is also similar to that presented for section 183. The industry share of taxpayers has remained relatively stable over time. In 1992, the largest single group of section 184 taxpayers was the trucking industry with 3,157 taxpayers (78 percent of the total). The miscellaneous and unidentified group at 13 percent (536 taxpayers) was the next largest. Only a small proportion of taxpayers are from the remaining groups: telephone and telegraph companies (4 percent), water transportation (3 percent), railroads (1 percent), and pipelines providing transportation (0.8 percent).

Tax Liability

Section B of Table 2 details how total section 184 liability changed from 1989 to 1992. Aggregate liability increased by 105 percent during the period. Approximately 96 percent of that increase occurred between 1989 and 1990. This increase was largely due to the increase in the tax rate on telephone and telegraph companies to equalize their rate with that of other section 184 taxpayers. Telephone and telegraph companies were subject to a lower (0.30 percent) rate of tax prior to 1990.

In 1989, the telephone and telegraph sector accounted for 61 percent of section 184 liability. In 1990, this proportion increased to 80 percent. By 1992, telephone and telegraph company liability equaled \$100.2 million of a total \$123.3 million, or 81 percent.

The second largest taxpayer sector in terms of liability was trucking at \$20.0 million (16 percent of the total). The remainder of section 184 liability was attributable to the following sectors: miscellaneous and unidentified (0.9 percent), pipelines providing transportation (0.8 percent), water transportation (0.5 percent), and railroads (0.3 percent).

Trucking companies accounted for 78 percent of all taxpayers under both section 183 and 184 in tax year 1992. However, the industry accounted for 16 percent of total section 184 liability compared to 4 percent under section 183. Many of these companies are small, single operator businesses that pay the minimum tax under section 183.

Section 186 Franchise Tax on Waterworks Companies, Gas Companies, Electric or Steam Heating, Lighting and Power Companies

Section 186 imposes a franchise tax on waterworks companies, gas companies, electric or steam heating, lighting and power companies. The tax rate equals 0.75 percent on the gross earnings from all sources on all companies principally engaged in providing the above services, or a combination thereof. In addition, a 4.5 percent tax applies on the amount of dividends paid in excess of 4 percent of the amount of paid-in capital employed in New York, subject to a \$125 minimum.

Number of Taxpayers

Section A of Table 3 presents the number of section 186 taxpayers by industry sector for the tax years 1989 through 1992. The total number of taxpayers remained almost unchanged over the period rising from 191 in 1989 to 193 in 1992.

The largest group of taxpayers was consistently the water industry which accounted for 53 percent of section 186 taxpayers in 1992. The second largest sector was electric and gas companies at 19 percent. This group includes all of New York's investor owned utilities that provide combined electric and gas service. The miscellaneous and unidentified group was the next largest, accounting for 18 percent of taxpayers. The remaining industry sectors were gas-only companies (5 percent), and pipelines selling natural gas (5 percent).

Tax Liability

Section B of Table 3 shows total section 186 liability by industry sector for the tax years 1989 through 1992. Total liability increased by only 1 percent over the period from \$168.9 million to \$170.7 million. However, the liability of electric and gas companies increased by \$6.7 million during the period. This increase was mostly offset by a decrease in pipeline tax liability. Although electric and gas companies accounted for only 19 percent of all section 186 taxpayers in 1992, they represented 87 percent of total liability (\$148.0 million).

The gas services-only sector accounted for the next largest proportion of total liability. Their tax liability was 10 percent in 1992. The remaining \$5.3 million in liability is shared among pipelines selling natural gas (2 percent), water companies (0.7 percent), and miscellaneous and unidentified taxpayers (0.1 percent).

Section 186-a Tax on the Furnishing of Utility Services

The section 186-a tax applies to all companies furnishing utility services, regardless of whether or not the provider is principally engaged in that business. Utility services include gas, electricity, steam, water, refrigeration, and telephone or telegraph service. The tax equals 3.5 percent of gross receipts. Providers subject to the supervision of the Department of Public Service pay the tax on gross income from all sources. Other providers pay the tax on gross operating income from the sale or provision of utility services.

All Sectors	\$168.9	100.0%	\$159.4	100.0%	\$161.7	100.0%	\$170.7	100.0%

1/ Totals may not add due to rounding.

2/ Total tax liability amounts do not reflect the 15% temporary business tax surcharge that applied to post-credit liability for tax years 1990-92 or the 17% Metropolitan Commuter Transportation District surcharge that applied in all years.

Number of Taxpayers

Section A of Table 4 presents the total number of section 186-a taxpayers by industry sector for the tax years 1989 through 1992. The total number of taxpayers remained virtually unchanged, increasing by only 4 taxpayers from 1,375 to 1,379 (0.3 percent). For 1992, almost half the taxpayers fall into the miscellaneous and unidentified group. Second, was the telephone and telegraph sector, which accounted for 34 percent (464 taxpayers) of all section 186-a taxpayers.

The electric and gas industry had 167 taxpayers (12 percent) in 1992. The remaining taxpayers were divided among water providers (6 percent), gas only providers (0.7 percent) and pipelines selling natural gas (0.4 percent).

Section 186-a includes a significantly greater number of taxpayers in the telephone and telegraph group than sections 183 and 184. This is because taxpayers subject to the section 186-a tax need not be principally engaged in providing utility services in order to be subject to the tax as is the case with sections 183 and 184. For example, this tax applies to hotels which charge their customers for placing telephone calls.

Tax Liability

Section B of Table 4 shows total section 186-a liability by industry sector for the tax years 1989 through 1992. Total liability increased over the period from \$737.9 million to \$993.1 million (35 percent). This increase was primarily attributable to two Tax Law changes.

First, effective July 1, 1990, in the telephone and telegraph industry sector, the Tax Law was changed to shift the deduction for access charges from local exchange carriers to long-distance (interexchange) carriers.⁶ In the case of interstate and international revenues, the law was amended to permit the access deduction prior to, rather than after, apportionment of these revenues to New York State. This change, in and of itself, resulted in a revenue increase for 1990 and subsequent years. However, this access deduction method was ruled unconstitutional by the New York State Court of Appeals in 1994.⁷

The second change in the Tax Law was an increase in the section 186-a tax rate from 3.0 percent to 3.5 percent effective January 1, 1991. As a result, total section 186-a revenue increased 24 percent from tax year 1990 to 1991 alone.

⁶Access fees are fees paid by long-distance carriers to local telephone companies to complete long-distance calls. These fees are deducted from gross receipts subject to tax under section 186-a.

⁷This decision exposes the State to about \$100 million in potential refund claims for tax years 1990 through 1993.

All Sectors	\$737.9	100.0%	\$751.6	100.0%	\$935.6	100.0%	\$993.1	100.0%

1/ Totals may not add due to rounding.

2/ Total tax liability amounts do not reflect the 15% temporary business tax surcharge that applied to post-credit liability for tax years 1990-92 or the 17% Metropolitan Commuter Transportation District surcharge that applied in all years.

Electric and gas companies, combined with the telephone and telegraph sector, accounted for most of the total section 186-a liability (93 percent). They account for \$514.0 million (52 percent) and \$407.8 million (41 percent), respectively. The remaining liability was divided among gas only providers (6 percent), water providers (0.6 percent), miscellaneous and unidentified providers (0.6 percent), and pipelines selling natural gas (0.2 percent).

Article 32: Corporate Franchise Tax on Banking Corporations

Tax Structure⁸

Article 32 levies a franchise tax on banking corporations doing business in the State. The bank tax is computed on the highest of four alternative bases:

- 9 percent of allocated entire net income (ENI); or
- 3 percent of alternative income (ENI without regard to specified exclusions); or
- \$250; or
- one-tenth, one twenty-fifth or one fiftieth of a mill of taxable assets allocated to New York (depending on net-worth-to-asset ratio and percentage of assets secured by mortgages).

Calculation of the taxes based on allocated ENI begins with federal taxable income, which includes certain exclusions and deductions. Taxpayers then make several New York modifications and allocate their income to arrive at New York taxable income. These modifications include, for example, a bad debt deduction for large commercial banks, a deduction for the eligible net income of international banking facilities (IBFs), deductions for a portion of interest income from government obligations and interest and dividend income from subsidiary capital.⁹ Banks conducting business both inside and outside New York allocate their income and assets by applying a three-factor allocation formula consisting of payroll, deposits, and receipts. The receipts and deposits factors are double-weighted.

Alternative entire net income differs from ENI, in that it does not include deductions for portions of subsidiary interest and interest on government obligations. In addition, the factors of the alternative income allocation formula are single weighted.

The tax on allocated taxable assets starts with the taxpayer's total assets. Taxable assets equal total assets less assets attributable to the Federal Deposit Insurance Corporation and the Federal Savings and Loan Insurance Corporation. Taxpayers then apply an allocation percentage, which

⁸For a more detailed description of the corporate franchise tax on banking corporations, see "New York State Tax Structure: History and Comparative Analysis," prepared by the New York State Department of Taxation and Finance, Office of Tax Policy Analysis, August 1994.

⁹For an analysis of how these deductions impact tax liability, please see "State of New York Tax Expenditure Report 1995-1996," prepared by the New York State Department of Taxation and Finance, in conjunction with the New York State Division of the Budget.

equals the percentage used for allocating ENI. The tax rate imposed on allocated taxable income equals:

Net Worth Ratio:	And the Percent of Mortgages Included in Total Assets:	Tax Rate:
Less than 4%	33% or more	.00002
At least 4% but less than 5%	33% or more	.00004
All others	All others	.0001

Taxpayers may take credits against the highest tax liability, with the exception of the \$250 minimum tax, to determine their after-credit liability. These credits include, for example, the job incentive credit and the special additional mortgage recording tax credit.

For the 1989 tax year, a 2.5 percent business surcharge was applied to the pre-credit liability of taxpayers. During the 1990 through 1993 tax years, a temporary 15 percent surcharge was applied to post-credit liability. The temporary surcharge dropped to 12.5 percent for the 1994 tax year.¹⁰ Effective through 1995, a surcharge rate of 17 percent also applies to taxes otherwise due, after deduction of credits, allocable to the 12-county Metropolitan Commuter Transportation District.

Description of Data and Terms

This section summarizes tax liability data for the tax years 1988 through 1992. Tables 5 and 6 present this data.

Tables 5 through 8 provide summary data for five separate categories of banks and the total for all banks. The five categories are clearinghouse banks, foreign banks, commercial banks, savings banks, and savings and loan associations. However, to protect taxpayer confidentiality, the clearinghouse and commercial bank categories were combined, and savings banks and savings and loan associations were grouped together. Each table provides statistics profiling the three groups of taxpayers for the tax years 1988 through 1992. The tables are labeled as follows: number of taxpayers and total tax liability; distribution of tax liability by basis of tax; allocated entire net income; and tax credits used.

¹⁰The surcharge is scheduled to decrease to 7.5 percent for the 1995 tax year, and to 2.5 percent for the 1996 tax year.

To assist readers in interpreting the tables, the data base and terms used in the tables are discussed below.

Data Source -

All tax statistics provided in this report come from data contained on bank tax returns. The tables are a tabulation of a data base of all bank returns manually reviewed by OTPA. The data are collected and verified by OTPA. Missing data are added where information exists. The data base includes all timely filed and amended returns available at the time the data base is created. There are no adjustments to the data base for audit results. The statistics do not reflect surcharges (discussed in more detail below) imposed on bank tax liability.

Number of Banks -

For purposes of presentation, this count reflects each consolidated or combined group, or each bank filing separately as a single filing entity. This count refers to each filing entity as a single bank.

Clearinghouse Banks -

Clearinghouse banks are financial institutions that are members of the New York Clearing House Association. As members of this Association, their functions include handling daily fund exchanges from other clearinghouse banks and settling exchanges.

Commercial Banks -

Commercial banks are institutions that are not classified as clearinghouse banks, foreign banks, savings banks or savings and loan associations. Banks included in this category are domiciled in the United States.

Foreign Banks -

Foreign banks, as defined in this data base, are commercial banks headquartered outside New York State, the United States or its possessions with nexus in New York State.

Savings Banks -

Savings banks are depository financial institutions that primarily accept consumer deposits and make home mortgage loans.

Savings and Loan Associations -

Savings and loan associations are depository financial institutions that receive deposits primarily from consumers and hold most of their assets as home mortgage loans. Unlike savings banks, these financial institutions are authorized to engage in commercial lending, nonmortgage consumer lending, and trust services.

Alternative Bases -

For confidentiality reasons, the taxable assets and alternative entire net income bases are aggregated in the tables. They are referred to in the tables as alternative bases.

Tax Liability -

The tax liability provided in the tables refer to amounts reported on Article 32 returns and included in the OTPA data base. The OTPA data base does not include surcharge data. Thus, the tax liability statistics do not reflect the Metropolitan Commuter Transportation District (MCTD) surcharge paid by insurance companies doing business within the MCTD region. The reported figures also do not include the temporary 2.5 percent pre-credit surcharge imposed in 1989 or the temporary 15 percent post-credit surcharge imposed in the 1990 tax year.

For tax years 1990 through 1992, data users may determine the amount of the post-credit surcharge by multiplying the amount of net tax liability after limitation and credits by 1.15 percent. The 2.5 percent pre-credit surcharge that applied during the 1989 tax year cannot be determined from the information presented in the tables.

Allocated Entire Net Income (ENI) -

Allocated ENI refers to the New York portion of ENI. Taxpayers determine the amount of ENI attributable to New York using formula apportionment.

Tax Credits Used -

The credit data are limited to credits used on the taxpayer's return. They do not reflect credits earned but not used, or balances of unused credits.

Job Incentive Credit -

A credit is allowed to the owner or operator of a business establishment which has been certified for eligibility by the New York State Job Incentive Board (prior to April 1, 1983) or the State Tax Commission (subsequent to April 1, 1983). An eligible business facility is a facility which is located in an eligible area and creates or retains at least five jobs. This

credit may not be carried forward to future taxable years. The credit expires for tax years beginning on or after January 1, 2000.

Mortgage Servicing Tax Credit -

A credit is allowed for servicing mortgages acquired by the New York State Mortgage Agency. The credit value varies by dwelling size and the amount of the mortgage.

Special Additional Mortgage Recording Tax Credit -

A corporation may claim a credit for the New York special additional mortgage recording tax paid on mortgages recorded on or after January 1, 1979. Taxpayers may carry forward the unused mortgage recording tax credit to future tax years. Mortgages on certain property, such as property in the Metropolitan Commuter Transportation District and Erie County, are ineligible for the credit.

Tables 5 through 8 provide summary data for five categories of Article 32 taxpayers for tax years 1988 through 1992.

Overview of Statistics

Number of Taxpayers and Total Tax Liability

Table 5 reports data on the number of taxpayers in each category, the amount of their total tax liability, the percent of the bank tax paid by each category, and the average tax liability of banks within each category.

Number of Taxpayers

This table shows that between the 1988 tax year and the 1991 tax year, the total number of banks increased from 826 to 831. The total number of banks dropped to 814 in the 1992 tax year. Foreign banks and the clearinghouse/commercial bank category were the largest groups of Article 32 taxpayers between 1988 and 1992. The number of banks classified as foreign banks increased from 340 in 1988 to 365 in 1992. The number of clearinghouse/commercial banks also increased during this period, from 324 to 328. Through 1992, foreign and clearinghouse/commercial bank groups each represented about 42 percent of the total number of Article 32 taxpayers.

The number of savings banks and savings and loan associations dropped from 162 in tax year 1988 to 121 in tax year 1992. This represented a decrease from approximately 20 percent of total Article 32 taxpayers to nearly 15 percent. This decrease resulted primarily from merger activity.

1992	Clearinghouse & Commercial	328	\$176,106,561	42.8%	\$536,910
	Foreign	365	161,702,101	39.3%	443,019
	Savings & Savings & Loans	121	73,857,258	17.9%	610,391
	All Banks	814	\$411,665,920	100.0%	\$505,732

1/ Total tax liability amounts do not reflect the 2.5% surcharge that applied to pre-credit liability for tax years ending after 6/30/89 and before 7/1/90 or the temporary 15% surcharge that applied to post-credit liability for tax years ending after 6/30/90 and before 7/1/94. This amount also does not reflect the 17% Metropolitan Commuter Transportation District surcharge.

Total Tax Liability

Total tax liability decreased nearly 18 percent, from \$301.6 million to \$247.8 million, between 1988 and 1990. A large portion of this change was attributable to a decrease in clearinghouse and commercial bank liability, which dropped by 28 percent from almost \$134 million in 1988 to \$96.6 million in 1990. The tax liability of savings banks and savings and loan associations also fell by about 36 percent during this period. Foreign banks were the only category that experienced overall growth in total liability between 1988 and 1990. During this period, the total tax liability of foreign banks increased steadily from \$86.4 million to \$98.6 million.

Total tax liability for all Article 32 taxpayers jumped from \$247.8 million in the 1990 tax year to \$343.9 million in the 1991 tax year. The tax liability of all categories of banks, except savings and loan associations, increased between 1990 and 1991. The largest percentage change in total liability occurred among clearinghouse and commercial banks, which increased by over 51 percent, from \$96.6 million to \$146.1 million.

Between 1991 and 1992, total tax liability increased sharply from \$343.9 million to \$411.7 million. All categories of banks experienced an increase in total tax liability during this period. The largest percent change in total tax liability occurred in the thrifts categories. The total tax liability of savings banks and savings and loan associations increased by about 42 percent, from \$51.9 million to \$73.9 million. Total liability of clearinghouse and commercial banks increased by roughly 21 percent between 1991 and 1992. Foreign banks experienced an 11 percent increase in total tax liability during this period.

Shares of Total Tax

Between 1988 and 1992, the most significant shifts in distribution of total bank tax liability occurred within the savings bank and savings and loan association, and foreign bank categories. The portion of bank tax paid by savings banks and savings and loan associations dropped from 27 percent in 1988 to 17.9 percent in 1992. In contrast, total tax liability of foreign banks jumped from 28.6 percent in 1988 to over 39 percent in 1992.

A more modest shift occurred in the distribution of total bank tax liability of clearinghouse and commercial banks. The tax liability of clearinghouse and commercial banks, as a percentage of total tax liability, decreased from approximately 44.4 percent to 42.8 percent between 1988 and 1992.

Average Tax Liability

The average tax liability for all banks increased from \$365,112 in the 1988 tax year to \$413,826 in the 1991 tax year. In the 1992 tax year, average liability for all banks increased to \$505,732. The average tax liability of all categories of banks was greater in 1992 than in 1988 through 1991.

Distribution of Tax Liability by Basis of Tax

Table 6 includes statistics regarding the distribution of tax liability by basis of tax. The table lists the number of taxpayers paying on the income base, alternative bases (asset or alternative bases), and the minimum tax base, and the amount of tax liability paid under each base.

Basis of Tax

Table 6 shows that, from 1988 through 1992, there was a steady increase in the portion of bank tax liability attributable to alternative based taxes. In 1988, Article 32 taxpayers paid \$37.1 million in taxes based on assets and alternative entire net income. Asset-base taxpayers accounted for over \$37 million of this amount. In 1988, alternative base liability represented 12 percent of the total liability under the bank tax. Alternative base taxes represented about 18 percent of total bank tax liability in 1991. During the 1992 tax year, alternative base taxes equaled about \$52 million. Asset-base taxpayers represented over \$50 million of that amount.

All classifications of banks exhibited movement toward alternative based tax liabilities. In terms of tax liability, the most significant shifts occurred among clearinghouse and commercial banks and foreign banks. In 1988, the alternative base liability of clearinghouse and commercial banks represented about 13 percent of their total bank tax liability. This portion increased to almost 36 percent in 1990, and dropped to over 12 percent in 1992. The alternative base liability of foreign banks, as a percentage of total foreign bank tax liability, followed a similar trend. In 1988, alternative base liability equaled about 22 percent of total foreign bank tax liability. The alternative base increased, as a portion of foreign bank liability, to almost 34 percent in 1990. This percentage decreased to just over 17 percent in 1992.

Allocated Entire Net Income

Table 7 provides data regarding the number of taxpayers with allocated positive and negative allocated entire net income, the amount of total positive and negative allocated entire net income, and the average amount of positive and negative allocated entire net income. These statistics indicate the number and types of banks reporting income or losses and the amount of the income and losses for each tax year.

Table 6
**Distribution of Tax Liability by Basis of Tax 1/
1988 - 1992**

Tax Year	Type of Bank	Income Base		Alternative Base		Minimum Tax	
		Number of Taxpayers	Liability	Number of Taxpayers	Liability	Number of Taxpayers	Liability
1988	Clearinghouse & Commercial	203	\$116,810,943	60	\$16,958,925	61	\$15,250
	Foreign	83	67,269,769	175	19,096,168	82	20,500
	Savings & Savings & Loans	136	80,347,768	7	1,058,347	19	4,750
	All Banks	422	264,428,480	242	37,113,440	162	40,500

	All Banks	568	4,302,014	7,574	246	(2,289,003)	(9,305)

The trend in the amount of allocated entire net income and losses indicates a significant decrease in New York income between 1988 and 1991 and an overall increase in the amount of allocated losses during that period. During this period, the trend in allocated entire net income and losses parallels the trend in total entire net income and losses.

The number of banks reporting positive allocated entire net income decreased overall from 1988 through 1992. However, the amount of positive allocated entire net income increased from \$3.3 billion in 1988 to \$4.3 billion in 1992. The number of banks reporting negative allocated income increased overall from 242 in 1988 to 246 in 1992.

Clearinghouse and commercial banks experienced substantial increases in New York losses between 1988 and 1991. The number of clearinghouse banks experiencing losses increased from 67 in 1988 to 92 in 1991. This number dropped to 77 in 1992. The amount of negative allocated entire net income increased from \$387 million in 1988, peaking at \$2.5 billion in 1990. The negative allocated losses for this group dropped to \$802 million in 1992.

Tax Credits Used

Table 8 provides statistics about the total number of banks using the special additional mortgage recording tax credit, mortgage servicing credit, and the job incentive credit between 1988 and 1992. This table also shows the value of the credits used during this time period.

As displayed in Table 8, between 1988 and 1992, the special additional mortgage recording tax credit was used more frequently than the other credits. In 1988, the value of the credit used by 164 taxpayers equalled \$13.8 million. In 1992, 133 taxpayers used this credit which totalled \$17.9 million.

The mortgage servicing credit was the second most frequently used credit during this period. The number of taxpayers taking the mortgage servicing credit ranged from 79 to 68. The amount of the credit used by these taxpayers ranged from \$4.2 million to nearly \$5 million.

Between 1988 and 1992, the number of taxpayers using the job incentive credit dropped from 30 to 7. The amount of the job incentive credit used also decreased from over \$12 million to \$4.6 million during this period.

Article 33: Corporate Franchise Tax on Insurance Companies

Tax Structure¹¹

New York imposes a franchise tax on insurance companies under Article 33 of the Tax Law. The franchise tax on insurance companies has two components. The first component of the tax is based on the higher of four alternative bases, plus a tax on subsidiary capital. The four bases and applicable tax rates include:

- 9 percent of allocated entire net income; or
- 0.16 percent of allocated business and investment capital; or
- 9 percent of allocated income and salaries basis; or
- a minimum tax of \$250.

The second component of the Article 33 tax is a tax on gross premiums, less return premiums thereon, written on risks located or resident in New York. Different tax rates apply to premiums written by life insurers and property and casualty insurers. Premiums received by corporations licensed as life insurers, including premiums on accident and health contracts, are taxed at a rate of 0.8 percent. Premiums written by corporations licensed as property and casualty insurers are taxed at the rate of 1.3 percent. However, premiums received by property and casualty insurers on accident and health contracts are taxed at the rate of 1.0 percent.

For corporations doing business within and without the State, the bases in the net income component of the tax are allocated to New York. The apportionment formula used includes weighted ratios of premiums (with a weight of nine) and wages (with a weight of one), earned or paid in New York to those earned or paid everywhere.

Taxpayers add the tax on gross premiums to the highest of the four alternative taxes (the income base), plus the tax on subsidiary capital. Taxpayers then subtract economic development zone credits. The remainder is "capped" at 2.6 percent of taxable premiums. This limitation on tax

¹¹For a more detailed description of the corporate franchise tax on insurance corporations, see "New York State Tax Structure: History and Comparative Analysis," prepared by the New York State Department of Taxation and Finance, Office of Tax Policy Analysis, August 1994.

represents the maximum tax on insurance companies. Taxpayers then claim credits other than EDZ credits against the total liability.¹²

For the 1989 tax year, a 2.5 percent business surcharge was applied to the pre-credit liability of taxpayers. During the 1990 through 1993 tax years, a temporary 15 percent surcharge was applied to post-credit liability. The surcharge dropped to 12.5 percent for the 1994 tax year.¹³ Effective through 1995, a surcharge rate of 17 percent also applies to taxes otherwise due, after deduction of credits, allocable to the 12-county Metropolitan Commuter Transportation District.

Description of Data and Terms

This section provides tax return data for the tax years 1987 through 1991. Tables 9 through 12 present this information. The tables provide statistics for four separate categories of insurance companies and for all insurance companies. To assist readers in interpreting the data, definitions of many of the terms used in the tables are provided below.

Data Base -

All tax statistics provided in this section are based solely on data as contained on insurance tax returns. The tables are derived from a data base developed by OTPA. The report does not adjust the return data for audit results. The statistics do not reflect surcharges (discussed in more detail below).

Tax Statistics -

The tax statistics provided in the tables refer to amounts reported on Article 33 returns and included in the OTPA data base. The OTPA data base does not include surcharge data. Thus, the tax liability statistics do not reflect the Metropolitan Commuter Transportation District (MCTD) surcharge paid by insurance companies doing business within the MCTD region. The reported figures also do not include the temporary 2.5 percent pre-credit surcharge imposed in 1989 or the temporary 15 percent post-credit surcharge imposed in the 1990 tax year.

For tax years 1990 and 1991, data users may determine the amount of the post-credit surcharge by multiplying the amount of net tax liability after limitation and credits by 1.15

¹²Insurance companies may claim the following credits under Article 33: economic development zone wage and capital credits (Tax Law Sections 1511(g)(h); life insurance company guarantee fund assessments (Tax Law section 1511(f)); special additional mortgage recording taxes paid (Tax Law Section 1511(e)); eligible business facilities (Tax Law Section 1511(d)); retaliatory taxes (Tax Law Section 1511 (c)); and fire insurance tax credits (Tax Law Section 1511(a)).

¹³The surcharge is scheduled to decrease to 7.5 percent for the 1995 tax year, and to 2.5 percent for the 1996 tax year.

percent. The 2.5 percent pre-credit surcharge that applied during the 1989 tax year cannot be determined from the information presented in the tables.¹⁴

Number of Taxpayers -

For purposes of statistical presentation, these tabulations count each tax return (consolidated, combined group, or separate) as a single filing entity.

Life Insurance Companies -

These include companies authorized by the Superintendent of Insurance to do an insurance business consisting of either insuring the lives of human beings or providing annuity contracts.

Property and Casualty Insurance Companies -

These include companies authorized by the Superintendent of Insurance to write insurance against the loss of, or damage to, property.

Others -

This category includes insurance companies authorized by the Superintendent of Insurance to write accident and health insurance, title insurance, mortgage and financial guaranty insurance, or reciprocal insurance.

Savings Banks -

Officers and employees of savings banks may be authorized by the Superintendent of Insurance to negotiate, order, solicit, or procure applications or orders for life insurance or annuity contracts.

Domestic Companies -

Domestic insurance companies are companies incorporated or organized in New York State.

Foreign Companies -

Foreign insurance companies are companies incorporated or organized in any other state, U.S. possession, nation, territory, or province.

¹⁴The 2.5 percent surcharge applied to each taxpayer's pre-credit liability (the lower of either the sum of the taxes measured by premiums, "income," and subsidiary capital, or 2.6 percent of gross premiums). The tables include the aggregate value of tax before limitation and credits, and the tax limitation for all Article 33 taxpayers. The data user cannot determine, from the tables, the amount of each individual taxpayer's pre-credit liability. As a result, the value of the 2.5 percent surcharge cannot be determined from the data presented in the tables.

Limitation on Tax -

Article 33 provides a "cap", or limitation, on total tax liability of an insurance company which equals 2.6 percent of gross premiums.

Fire Insurance Tax Credit -

Taxpayers may take a credit for additional taxes on premiums written by corporations organized in another state or country for any insurance against loss or damage by fire, paid by foreign fire insurance companies and foreign mutual fire insurance companies. These taxes are imposed under the Insurance Law. Unused credits may not be carried forward.

Retaliatory Tax Credit -

Taxpayers domiciled or organized in New York may take a credit for up to 90 percent of any retaliatory taxes paid to other states as a result of New York State-imposed taxes on insurers domiciled or organized in those other states. Taxpayers may elect to have the unused credit either refunded or carried forward to future tax years.

Job Incentive Credit -

A credit is allowed to the owner or operator of a business establishment which has been certified for eligibility by the New York State Job Incentive Board (prior to April 1, 1983) or the State Tax Commission (subsequent to April 1, 1983). An eligible business facility is one which is located in an eligible low-income area and creates or retains at least five jobs. The credit may not be carried forward to future taxable years.

Special Additional Mortgage Recording Tax Credit -

Taxpayers may take a credit which is equal in amount to the special additional mortgage recording tax paid on mortgages recorded on or after January 1, 1979, on property which is located within New York. Mortgages on certain property, such as property in the Metropolitan Commuter Transportation District and Erie County, are ineligible for the credit. The unused credit may be carried forward and used in subsequent years.

Economic Development Zone Credits -

Taxpayers may qualify for credits for certain investments and creating jobs in Economic Development Zones. Unused credits may be carried forward indefinitely.

Overview of Statistics

Tables 9 through 12 provide statistics regarding four categories of insurance companies subject to Article 33 for tax years 1987 through 1991. The four categories include life insurance companies, property and casualty insurance companies, other insurance companies (accident and health, title, mortgage and financial guaranty and reciprocal insurers), and savings banks.

Tables 9 through 12 present statistics similar to those presented in the insurance tax liability table formerly included in the annual Statistical Report published by the Office of Tax Policy Analysis.¹⁵ This table was last included in the 1988-89 Statistical Report for the 1986 tax year. This section provides data beginning with the 1987 tax year.

Tax Liability Before Limitation and Credits

Number of Taxpayers

As shown in Table 9, the number of insurance companies subject to Article 33 increased from 731 in 1987 to 791 in 1991. Property and casualty insurers consistently represented roughly two-thirds of the Article 33 taxpayers during this period. This group of taxpayers increased in number from 478 in 1987 to 537 in 1991. This increase was primarily due to foreign property and casualty insurers, which increased in number from 355 to 409 (see Table 10).

Table 9 also shows that life insurers were the second largest group of Article 33 taxpayers. From 1987 through 1991 tax years, life insurers increased in number from 153 to 157. Between 1987 and 1991, life insurers represented about 20 percent of all Article 33 taxpayers. During the same period, the two remaining categories of Article 33 taxpayers, other and savings banks, accounted for roughly 15 percent of the total.

Tax Liability Before Limitation and Credits

Table 9 also shows that, between 1987 and 1991, tax before the 2.6 percent limitation on premiums and credits increased from \$432.7 million to \$560.2 million. This represented a 30 percent increase during this period.

¹⁵ The tables included in this corporate tax statistical report provide data comparable to that provided in the tables included in the annual Statistical Report prior to 1988-89. The tables in this corporate tax statistical report provide additional information, including the amount of the premiums based tax and income based tax and the percent of tax from the income based tax. The tables also aggregate tax credit information in order to maintain confidentiality.

<u>1991 Tax Year</u>				
Life	157	\$203,626,344	36.3%	\$1,296,983
Property & Casualty	537	331,124,264	59.1%	616,619
Others 2/	60	23,840,194	4.3%	397,337
Savings Bank	37	1,600,264	0.3%	43,250
Total	791	\$560,191,066	100.0%	\$708,206

1/ The statistics included in this table do not reflect the 2.5% surcharge that applied to pre-credit liability in the 1989 tax year; the temporary 15% surcharge that applied to post-credit liability for the 1990 and 1991 tax years; or the 17% Metropolitan Commuter Transportation District surcharge.

2/ "Others" includes accident & health, title, guarantee & reciprocal insurance companies.

3/ Totals may not equal 100% due to rounding.

Between 1987 and 1991, the share of tax liability attributable to property and casualty insurers dropped from over 71 percent to 59 percent. During this period, the percentage of total tax liability attributable to life insurers increased from nearly 26 percent to over 36 percent. The tax liability of the remaining categories of insurers represented less than 5 percent of total liability.

Average Tax Liability

As displayed in Table 9, the average tax liability of all Article 33 taxpayers, before application of the limitation and credits, increased from \$591,958 in 1987 to \$708,206 in 1991. Life insurers had the highest average tax liability between 1987 and 1991. Their average tax liability ranged from \$730,112 to \$1,296,983 in those tax years. Property and casualty insurers had the second highest average tax liability, which ranged from a low of \$576,486 to a high of \$640,844. Insurers classified as "others" had an average tax liability of about \$257,000 between 1987 and 1989. The tax liability of that group increased to \$397,337 in 1991.

Tax Liability of Foreign and Domestic Insurers Before Limitation and Credits

Table 10 shows that, during tax years 1987 through 1991, foreign insurers paid over 60 percent of the total insurance tax. Foreign property and casualty insurers accounted for the largest portion of total insurance tax liability, ranging between 44 percent and almost 55 percent of total liability. Foreign life insurers, in contrast, paid less than 20 percent of total insurance tax liability during this four-year period.

This trend differed among domestic insurers, which paid about one-third of total insurance tax liability between 1987 and 1991. Domestic life insurers and property and casualty insurers paid, on average, about 18 percent and 15 percent of total liability, respectively.

Tax Liability by Basis of Tax

Percentage of Tax from Premiums and "Income" Bases

As illustrated in Table 11, the premiums basis, as a percentage of total Article 33 tax liability before application of the tax limitation and credits, equaled roughly 60 percent between the 1987 tax year and the 1991 tax year.

1/ The statistics included in this table do not reflect the 2.5% surcharge that applied to pre-credit liability in the 1989 tax year; the temporary 15% surcharge that applied to post-credit liability for the 1990 and 1991 tax years; or the 17% Metropolitan Commuter Transportation District surcharge.

2/ The income based portion of the tax is the higher of four alternative bases, plus a tax on subsidiary capital.

3/ "Others" includes accident & health, title, guarantee & reciprocal insurance.

Between 1987 and 1991, the premiums basis, as a percentage of total tax liability, ranged from about 64 percent to 70 percent for property and casualty insurers. For life insurers, this percentage dropped from 61 percent in 1987 to 41 percent in 1991. Another significant change in the premiums basis as a percentage of total tax liability occurred in the "others" category, which dropped from an average of about 63 percent in 1987 through 1989 to 42 percent in 1991.

Tax Liability After Limitation and Credits

Tax Limitation

As shown in Table 12, the number of taxpayers whose tax liability was "capped" at 2.6 percent of gross premiums increased from 217 in 1987 to 284 in 1991. During this period, the value of the cap, or the limitation on tax liability, for all Article 33 taxpayers increased from \$36.3 million in 1987 to \$77.5 million in 1991. Property and casualty insurers are the category of taxpayer that tend to benefit the most from the limitation. This category represented over 55 percent of the total value of the limitation in 1991.

Tax Credits

From 1987 through 1991, the overall number of taxpayers using credits increased from 285 to 303. The amount of credits used by Article 33 taxpayers equaled over \$53 million in the 1987 tax year and dropped to roughly \$42 million in the 1991 tax year. Retaliatory tax credits, which may be used only by domestic Article 33 taxpayers, represented a large portion of total credits used by life insurers between 1987 and 1991. In contrast, the retaliatory credit represented a small portion of the total amount of credits used by property and casualty insurers between 1987 and 1991. This may be attributable to the high proportion of foreign to domestic property and casualty insurers.

Tax Liability After Tax Limitation and Credits

Table 12 shows that tax liability after limitation and credits equaled nearly \$343 million in the 1987 tax year and over \$440 million in the 1991 tax year. As a percentage of total insurance tax liability, net tax after adjustments ranged between 76 percent and 80 percent of total liability from 1987 through 1991.

Total	232	\$56,264,657	296	\$45,127,112	\$101,391,769	\$359,699,286
<u>1991 Tax Year</u>						
Life	61	\$25,270,960	23	\$6,148,250	31,419,210	\$172,207,134
Property & Casualty	194	42,791,013	269	33,939,544	76,730,557	254,393,707
Others	29	9,400,204	11	2,235,577	11,635,781	13,804,677
Total	284	\$77,462,177	303	\$42,323,371	\$119,785,548	\$440,405,518

1/ The amount displayed in the "Tax Limitation" column equals the amount of a taxpayer's total tax liability minus the limitation on the taxpayer's total tax liability (which equals 2.6 percent of the taxpayer's gross premiums).

2/ Total credits includes the retaliatory tax credit, job incentive credit, EDZ wage and capital credits, fire premiums credit and the mortgage recording tax credit. The number of life and property and casualty insurers using the retaliatory credit and the amount used equalled:

	<u>Life Insurers</u>	<u>Property & Casualty</u>
1987	13	\$8.7m. 38
1988	14	\$4m. 49
1989	16	\$4m. 47
1990	18	\$7.6m. 47
1991	23	\$6.2m. 46

3/ The number of taxpayers displayed in the "Total Credits" column reflects the number of taxpayers taking individual credits. Because taxpayers may use multiple credits, the same taxpayer may be included in this column more than once. Although the Tax Law provides that EDZ credits apply before the limitation on tax, the number of EDZ credits claimed was not material between the 1987 and 1991 tax years. Therefore, the EDZ credits were included in the Total Credits column.

4/ The tax statistics included in this table do not reflect the 2.5% surcharge that applied to pre-credit liability in the 1989 tax year; the temporary 15% surcharge that applied to post-credit liability for tax years beginning after 6/30/90 and ending before 7/1/94; or the 17% Metropolitan Commuter Transportation District surcharge.

5/ In order to maintain confidentiality, savings banks were included in the "others" category.
