# Introduction and Background

---

Part A of Chapter 63 of the Laws of 2005 mandated an annual report of credit activity under the Empire Zone (EZ)/Qualified Empire Zone Enterprise (QEZE) program. To provide policy-makers with more complete information on the EZ/QEZE program, the Office of Tax Policy Analysis (OTPA) is issuing this document which contains summary information from the mandated study. The mandated report contained final 2002 and preliminary 2003 data for corporate taxpayers and final 2003 data for personal income taxpayers. Final 2002 data has already been issued to the Legislature and the Division of the Budget in the form of study files.

Final 2002 data on the EZ/QEZE credits is also available in the *Analysis of Article 9-A General Business Corporation Franchise Tax Credits, 2002* annual study published by OTPA, and in the annual *New York State Tax Expenditure Report*, published as a supporting document to the Executive Budget.

The data used to generate this report come from final 2002 and preliminary 2003 corporate tax study files and the final 2003 personal income tax study file. The 2003 data is preliminary for corporations because of filing timelines. Corporations have 2½ months after the close of their fiscal year to file tax returns (March 15 for calendar year filers). Businesses may then request a 6 month extension and two 3 month extensions. Therefore, a taxpayer may not be required to file their final tax return until a full year after their original filing date. In addition, since many corporate filers use a fiscal period that differs from a calendar year, complete information for one tax year may not be available for three years.

Preliminary data comes directly from the credit forms and has not been verified. Historical analysis has shown that in some instances, data can change nearly 100 percent between preliminary and verified data due to errors or incomplete data.

---

# Explanation of Tables and Terms

---

Summary tables are included for Articles 9-A, 32, and 33. Where possible, data is displayed by zone and income class. Due to disclosure provisions, statewide data is not available in categories with fewer than three taxpayers and at the zone level in zones with fewer than 8 taxpayers. For this reason, the sum of individual categories may not equal the total row. This means that non-discloseable categories or zones have been deleted from view. For display reasons, in certain tables non-discloseable material is blacked-out. Tables that would contain a significant number of non-discloseable categories have been omitted, e.g. Article 32 and 33 tables.

Final 2002 liability year employment data is reported for the EZ wage tax credit and the QEZE credits. Because of differences in the employment measurement periods, the employment data is reported separately for the credits. For the wage tax credit, base and current year employment figures are reported along with the number of targeted and nontargeted employees. For the QEZE credits, the base and current year employment figures are reported along with the test year employment figure. Taxpayers do not report employment figures beyond those necessary to calculate their eligibility for and amount of these credits. Also, taxpayers claiming the QEZE credits as corporate partners do not calculate employment figures. They report only amounts passed through to them from the partnership on the credit form.

The preliminary nature of the 2003 corporate data precludes the employment tables for that year. Unverified 2003 values may show incorrect employment decreases which could significantly skew the overall total and zone-level employment figures. During verification, employment data are captured and inspected to ensure that the taxpayer is not earning credit incorrectly. Taxpayers showing a net decrease in employment are not allowed to earn credit, but they may use a credit carried forward amount from a prior year. Employment figures were not captured during processing of personal income tax forms in 2003 and are therefore unavailable. These figures will be captured starting with the 2005 tax year and preliminary data will be available in 2006.

---

## Description of Tables

The tables in this report present information for the following components of the Empire Zone (EZ)/Qualified Empire Zone Enterprise (QEZE) tax credits:

Credit Earned	The amount of credit generated in the current tax year.
Credit Claimed	The amount of credit which taxpayers have available during the taxable year. Taxpayers determine the amount of credit claimed by adding the amount of credit earned in the current year to the amount of unused credit from the prior year and subtracting any applicable credit recapture.
Credit Used	The amount of credit which taxpayers actually apply to their tax liability.
Credit Refunded	Generally, taxpayers may only use credits to reduce liability to the higher of the alternative minimum tax or fixed minimum tax. For certain EZ/QEZE credits, the excess beyond these limitations may be requested as a refund. Credit refunded amounts also include amounts eligible for refund, but instead claimed as an overpayment applied against the next period's tax liability at the discretion of the taxpayer.
Credit Carried Forward	Any unused amount of credit which is allowed to be used to offset tax liability in future years. The amount of credit carried forward is determined by subtracting the amount of credit used or refunded in the current year from the amount of credit claimed. The computation for credit carried forward does not apply to the QEZE credits. The credit for real property taxes is fully refundable and the tax reduction credit does not allow any carryforward.

---

## Data Considerations

The data contained in these tables come directly from the returns of corporations and individuals claiming the credits. In some instances, taxpayers may report information incorrectly or may omit information from the return. Taxpayers who did not indicate a particular Empire Zone are assigned to the “Unidentified” category. Taxpayers located in more than one zone were assigned to the “Multiple Zones” category.

Taxpayers permitted to take the EZ investment tax credit (EZ-ITC) and the EZ employment incentive credit (EZ-EIC) report amounts earned during the tax year on separate lines on the tax form. However, when computing the other credit components, taxpayers combine the amounts on the form. This report presents these combined amounts each of the credit components.

The Tax Law limits some credits to a percentage of tax due or allows only a portion of the credit to be used. The law also contains different requirements regarding refundability of the credits.

In the aggregate, the EZ wage tax credit cannot exceed 50 percent of the tax calculated prior to applying any other credits.

The EZ wage tax credit, EZ-ITC, the QEZE real property tax credit (RPTC), and the EZ capital credit cannot reduce liability below the higher of the alternative minimum tax or the fixed dollar minimum tax.

The EZ-EIC and the QEZE tax reduction credit are limited by the fixed dollar minimum tax only. However, if a taxpayer has a zone allocation factor of 100 percent, they may apply the QEZE tax reduction credit against the fixed dollar minimum base.

Several credits allow a refund of excess credit to new businesses only. The EZ wage tax credit and the EZ-ITC allow 50 percent of excess credit to be refunded by new businesses. The QEZE RPTC is fully refundable to all businesses.

When calculating QEZE eligibility and credit amounts, taxpayers aggregate their employment information for all the zones in which they are located. For the small number of QEZEs who are located in more than one zone, it is not possible to allocate employment and credit information to specific zones. Therefore, the “Multiple Zones” category is used.

The EZ capital credit is not zone-specific. Any taxpayer can claim the EZ capital credit by investing in or donating to EZ capital corporations, investing in EZ businesses, or contributing to EZ community

---

development projects. Because zone-level tables are not applicable for this credit, data is presented by tax article.

For this report, the 2003 data was obtained from the Department's "Corp Tax Staging Database." The credit data that was acquired from this database is unverified taxpayer information for taxpayers whose taxable year begins in 2003. Since the Empire Zone in which the taxpayer is located is not captured, that information was manually added to this data on a taxpayer by taxpayer basis. No mathematical verification was performed on this data. In addition to the values being unverified, the 2003 file only contains data from one credit form for each credit. For example, for taxpayers with the same credit in multiple zones, such as the wage tax credit, the preliminary data contains information from only one of those zones for each of the credits.

2003 preliminary corporation tax data also contain amounts earned by S corporations. S corporations earn the credit, but then pass the amount along to their shareholders who report their share of the credit on their personal income tax returns. For the QEZE tax reduction credit, S corporations do not calculate an amount earned because the tax factor used to calculate the credit is based on the shareholder's tax.

Data for personal income taxpayers comes from two sources and two separate processes. Refundable credit comes from the actual values on the weighted 2003 PIT study file. Non-refundable credit comes from the study file augmented by credit component data from lines 42 through 63 of the IT-201-ATT and 28 through 49 of the IT-203-B. The components are not verified, however the totals are consistent with the verified tax amount from the study file.

The 2003 personal income tax study file consists of a stratified sample of approximately 247,000 personal income tax filings selected from a total filing population of just under 9 million returns, approximately 8 million of which were from New York State residents. Both taxable and nontaxable returns were sampled and, for the first time in 2003, credit takers were used as a sampling criteria. The sample is weighted to be consistent with income and liability totals for the taxpayer population contained on the New York State Department of Taxation and Finance master file. The information reflects corrections for computational or minor errors.

Application of credits to reduce liability and credit data collection is done differently under the personal income tax than under corporate taxes. Taxpayers aggregate all their non-refundable and refundable credits on an attachment and carry the totals to the main return.<sup>1</sup> They do

---

not calculate actual amounts of each credit used. Therefore, values are only available for a limited number of components. Starting in 2006, the used and refunded credit components that are currently captured for corporation tax will be captured and keyed for the 2005 personal income tax year.

Amounts claimed by personal income taxpayers arise from their activity as a sole proprietor or are passed through to them as members of a partnership or shareholders of an S corporation. Refundable credit amounts are not necessarily requested as a refund in their entirety. Credits are applied to reduce liability first, and any excess credit may be received as a refund.

The available data for all tables do not reflect changes made on audit or amended filings.

---

# Endnotes

---

1. New York State non-refundable credits are combined in Sections A and B of Part IV of form IT-201-ATT, Itemized Deduction and Other Taxes and Tax Credits-Attachment to Form IT-201. EZ/QEZE refundable credits are combined in Section D of form IT-201-ATT. Non-residents and part-year residents use form IT-203-B, Other New York State and City of New York Taxes and Tax Credits-Attachment to Form IT-203, to aggregate credits. Fiduciaries report total credit amounts directly on the tax return, form IT-205, Fiduciary Income Tax Return.
