Appendix

Appendix: New York State Personal Income Tax Returns — 1999	A-1
---	-----

Introduction

This annual study provides statistical information on 1999 New York State personal income tax returns that were timely filed during 2000. The data are from full-year resident, full-year nonresident, and part-year resident returns. The report categorizes returns as either taxable or nontaxable depending on the presence or absence of taxable income and income tax liability. Data presented include the distribution of New York adjusted gross income and tax liability by residence and the value of deductions, exemptions, and taxable income by income class.

Residents, Nonresidents, and Part-Year Residents

The resident classification represents tax returns filed by individuals living in New York during the entire year. The individual's New York State residence on December 31, 1999 is the basis for determining the county of residence for resident filers.

Nonresident filers are generally individuals who live outside New York, but who receive income from activities within the State. These filers frequently reside in states bordering New York and commute to work in New York. Nonresident filers also include previous New Yorkers presently residing in other states such as Arizona and Florida. Finally, this category includes information from residents of foreign countries receiving taxable income from sources within New York.

Individuals either moving into New York or moving out of the State during the year file part-year resident tax returns.

Taxable, Nontaxable, and All Tax Returns

All tax returns filed by residents, nonresidents and part-year residents are categorized as either taxable or nontaxable returns. Returns that have a New York State tax liability after having been processed by the Tax Department are defined as taxable returns. Nontaxable returns do not have a tax liability. Individuals may file nontaxable returns to fulfill legal filing requirements, receive a refund of income tax withholding, or to claim refundable credits. Credits that are refundable without a tax liability include the earned income, child and dependent care, real

property and the farmers' school tax credits administered through the personal income tax law.

Comparison With Other OTPA Data

The statistics reported in this publication do not completely coincide with data presented in the *Analysis of 1999 Personal Income Tax Returns* (PIT) publication, which is also prepared by the Office of Tax Policy Analysis (OTPA). This report tabulates information from all returns filed with the Tax Department for 1999. The data represent amounts accepted by the Department's tax return processing system and its tolerances. The information is collected prior to income tax exceptions manual review and may contain data entry errors. Analysts have attempted to adjust the most egregious mistakes.

In comparison, OTPA's *Analysis of 1999 Personal Income Tax Returns* data are derived from a statistically valid sample of 110,883 tax returns. After drawing the sample, OTPA subjects each tax return to extensive data verification, editing, and correction. The completed sample file is weighted to represent the 1999 filing universe.

In summary, the PIT publication data pass through a comprehensive verification and correction process subjecting the sampled records to more restrictive data tolerances than the data appearing in this report. However, OTPA's PIT data are also subject to sampling error.

Findings

All Filers Summary

In 2000, the Department received 8.54 million timely filed New York State personal income tax returns for the 1999 liability year. This value compares with 8.39 million tax returns filed for the 1998 liability year (an increase of 1.8 percent). These filers reported total New York adjusted gross income of \$556.2 billion. Aggregate tax liability for 1999 was \$21.0 billion, an increase of 11.1 percent from \$18.9 billion in 1998.

Some major findings for 1999 include:

- Approximately 91 percent of all tax returns and 86 percent of all tax liability were from full-year residents of the State.
- New York adjusted gross income for all filers increased by \$52.1 billion, reflecting a growth rate of 10.3 percent from 1998.
- New York adjusted gross income for full-year residents increased by \$30.6 billion, which is an 8.3 percent increase from 1998.
- The second largest share of New York adjusted gross income and tax liability belonged to full-year nonresidents. Their reported income from federal sources, including non-New York income, reached \$144.0 billion. Income tax liability increased to \$2.7 billion from \$2.4 billion in 1998.
- Part-year resident filers reported the smallest share — \$12.7 billion in income and \$356 million in tax liability.

Table 1: Total Income and Tax Liability by Place of Residence in 1999
(Dollar Data in Thousands)

Tax Liability**	(\$375,973)	(\$256)	(\$2,148)	(\$378,377)

* Total income is New York Adjusted Gross Income on resident tax forms IT-100, 200, and 201; and Line 30, Federal amount including non-New York income, on full-year nonresident and part-year resident tax form IT-203.

** Includes refundable tax credits.

Full-Year Residents

The 7.77 million full-year resident tax returns reported New York adjusted gross income (NYAGI) of \$400 billion and a tax of \$17.9 billion. Table 2 shows 56 percent of all returns had NYAGI of less than \$30,000. This group accounted for 13.7 percent of all income and 2.3 percent of tax liability. Taxpayers in the highest income group, with income in excess of \$200,000, accounted for 2.4 percent of all tax returns, 33.1 percent of New York adjusted gross income, and paid 45.4 percent of tax liability.

Table 2: Income Tax Components of Full-Year Residents by Size of Income (All Returns) in 1999
(Dollar Data in Thousands)

Income Class	Number	NYAGI*	Deduction	Dependent Exemptions	Taxable Income	Tax Before Credits	Tax Liability

Total	7,773,997	\$399,550,076	\$81,600,700	\$4,321,235	\$313,628,683	\$19,136,664	\$17,944,165

* New York Adjusted Gross Income on resident tax forms IT-100, 200, and 201.

The effective tax rate, defined as tax liability as a percentage of New York adjusted gross income, equaled 4.49 percent for all resident filers in 1999. In other words, resident filers paid an average State income tax of \$4.49 for every one hundred dollars reported in adjusted gross income.

Average effective tax rates ranged from less than zero for filers with under \$10,000 in income, to 6.17 percent for filers with income in excess of \$200,000. Filers with no State income tax liability who are eligible for refundable credits, have a negative income tax and a negative effective tax rate. Refundable credits include the earned income tax credit, the child care credit, and/or the real property tax credit among others.

Tables 3, 4, and 5 detail resident information by county. New York City data are presented first, followed by an alphabetical listing of counties excluding the five counties that represent the City.

Table 3 depicts the distribution of returns, New York adjusted gross income, and tax by county and tax status. This edition continues to include the format change initiated in the report on 1994 taxes. This publication's format relies on the type of tax return filed as a primary basis for determining the filer's permanent place of residence. Thus individuals filing a resident tax return (IT-100, IT-200, or IT-201) having a non-New York State address are classified as New York State residents and placed in the "Residence Unknown" category for full-year residents. This outcome is possible because the Tax Department accepts resident income tax forms from part-year residents moving to another state during the tax year. Studies conducted prior to 1994 used each filer's address as the primary basis for classifying residence and placed filers with a non-New York State address on a resident return in the nonresident returns category. Readers are advised to consider this change when analyzing taxpayer migration trends.

Table 4 displays major income tax structure components: income, deductions, dependent exemptions, and tax liability by county. The table also provides this information by size of income.

Table 5 provides average income and tax liability by county. The data indicate that the distribution of income is highly variable across counties within New York for resident filers.

* New York Adjusted Gross Income on resident tax forms IT-100, 200, and 201.

+ Resident returns that could not be classified by county.

++ Includes resident tax returns (IT-100, 200, and 201) with an out-of-state address.

Nonresidents

Tables 6 through 8 provide information on individuals with income from New York sources that resided out-of-state for the entire year. Data reported by these individuals have been classified by the federal amount of New York adjusted gross income, as determined on form IT-203. For tax years prior to 1997, data for nonresident filers were classified by only the New York source amount of New York adjusted gross income. Therefore, data users should exercise caution when comparing data from recent years with data from prior to 1997. More than 583,000 returns fell into this category during 1999. The neighboring states of New Jersey, Connecticut, Massachusetts and Pennsylvania accounted for 71.5 percent of all nonresident income tax filers. As shown in Figure 1, these states accounted for over three-fourths of the total New York income tax liability paid by full-year nonresidents.

Figure 1: Share of Nonresident Tax Liability by Place of Residence in 1999

Table 6 shows income tax components by size of income for full-year nonresidents. Note that values for income, deductions, dependent exemptions, taxable income, and tax before credits are reported as if these filers were residents. New York State requires nonresidents to report income, deductions, and dependent exemptions as they would for federal tax purposes and computes an initial tax as if they were full-year residents of New York. Next, nonresidents prorate the initial tax based on the relationship of New York source income to Federal source New York adjusted gross income.

- The number of full-year nonresidents filing a New York State personal income tax return grew by 10,699 to 583,580 in 1999.
- Average New York tax liability for full-year nonresident returns increased 7.5 percent to \$4,589 in 1999. This is \$2,281 more than the average tax reported on full-year resident returns

Table 7 presents total New York adjusted gross income and tax liability for nonresidents displayed by place of residence. The table supports New York's reputation as both a national and an international economic hub. Similar to the changes made to the classification of certain resident returns, beginning with the 1994 report, the Office of Tax Policy Analysis changed the way it handles nonresident (IT-203) returns containing New York State addresses. These filers are currently classified as nonresidents with "residence unknown". This category frequently includes nonresident filers using New York State based tax preparers. Since pre-1994 editions of this report classified similar returns as resident returns, data users are advised to consider the format change prior to any analysis of taxpayer migration.

Table 8 includes income tax component information by size of income as reported by nonresidents for selected states and countries. As expected, the distribution of income varies considerably because nonresidents represent both retirees who maintain a connection to New York and employed filers.

Part-Year Residents

Tables 9 and 10 highlight information on individuals who had income from New York sources and resided in New York for only part of 1999. Data reported by these individuals have been classified by the federal amount of New York adjusted gross income, as determined on form IT-203. For tax years prior to 1997, data for part-year filers were classified by only the New York source amount of New York adjusted gross income. Therefore, data users should exercise caution when comparing data from recent years with data from prior to 1997.

- In 1999, part-year resident filers represented 2.1 percent of all personal income tax filers.
- The number of filers identified as part-year residents increased by 7.5 percent to 177,887 in 1999.
- Tax liability reported by part-year residents equaled \$356 million in 1999.

OTPA uses a multi-step process for assigning tax returns to the part-year resident category. The primary selection criterion, also used for classifying full-year resident and full-year nonresident filers, is tax return type. In effect, OTPA considers only tax return IT-203 filers for the potential part-year return population. This selection method adheres to personal income tax form instructions which direct part-year filers to use the IT-203 tax form. However, the resulting part-year population is understated because the Tax Law permits filers to compute their tax either as residents or part-year residents to minimize tax liability. For example, move-ins may file a resident tax return although they are a resident for only a portion of the tax year and they have no New York income during their nonresident period. For the purposes of this report, data on these filers are included in the full-year resident tables.

After limiting the potential part-year resident population to IT-203 form filers, OTPA computer programs review the tax forms to select the part year tax form check-off box, permanent address, and tax mailing label address information. These data are used to cull the part-year filers from the entire IT-203 population. Unfortunately, the data presented in these fields are not always critical to the processing of the return. Part-year resident information can often be conflicting, potentially misleading and incomplete, thereby reducing the reliability of the data.

Two other factors further diminish the usefulness of these data as a tool for understanding migration trends. First, the data are not an inclusive representation of part-year resident activity occurring within the State. Part-year residents filing a resident return are identified as full-year residents. Also, the displayed information includes data only from filers with a continuing linkage to the State's income tax law. For example, individual moving out-of-state with no income attributable to New York are not required to file a New York tax return. An additional potential complexity is the effect that length of residency has on income and tax liability data presented in the table.

Data Sources

The information contained in this report comes from an examination and tabulation of selected data variables reported by filers on their 1999 New York State income tax returns. These returns were processed during calendar year 2000. The full-year resident data were drawn from the three resident tax forms: IT-100, IT-200, and IT-201. Full-year nonresident and part-year resident filers generally file the IT-203 income tax return. A sample of each resident, nonresident, and part-year resident tax return for 1999 appears in the Appendix.

Tax Liability and Collections

The data presented in this report represent tax liability and not tax collections. Tax liability is defined as State income tax owed as reported on a New York State personal income tax return. In contrast, annual tax collections summarize all payments made under the income tax law for at least three tax return years. These payments include withholding, collections on audit assessments for current and prior year returns, settlements on current year returns (final payments and refunds), and estimated payments for subsequent year returns.
